5  
6 THE 2017 HURRICANE SEASON: A REVIEW OF  
7 EMERGENCY RESPONSE AND ENERGY INFRASTRUCTURE  
8 RECOVERY EFFORTS

9 THURSDAY, NOVEMBER 2, 2017

10 House of Representatives

11 Subcommittee on Energy

12 Committee on Energy and Commerce

13 Washington, D.C.

14  
15  
16  
17 The subcommittee met, pursuant to call, at 10:00 a.m., in  
18 Room 2123 Rayburn House Office Building, Hon. Fred Upton [chairman  
19 of the subcommittee] presiding.

20 Members present: Representatives Upton, Olson, Shimkus,  
21 Murphy, Latta, Harper, McKinley, Kinzinger, Griffith, Johnson,  
22 Long, Bucshon, Flores, Mullin, Hudson, Walberg, Walden (ex  
23 officio), Rush, McNerney, Peters, Green, Doyle, Castor, Sarbanes,  
24 Welch, Tonko, Loeb sack, Schrader, Kennedy, Butterfield, and  
25 Pallone (ex officio).

1

and Catherine Zander, Minority Environment Fellow.

1           Mr. Upton. [presiding] The Subcommittee on Energy will  
2 now come to order.

3           And the Chair will recognize himself for an opening  
4 statement.

5           So, this year's Atlantic hurricane season was unprecedented.  
6 Four named storms in close succession slammed into the Gulf,  
7 Puerto Rico, and the U.S. Virgin Islands. These hurricanes  
8 caused catastrophic damage and energy supply disruptions across  
9 the country. While Texas and Florida are further down the road  
10 to recovery, a humanitarian crisis is unfolding in Puerto Rico  
11 -- a number of colleagues from this committee have been down there  
12 -- and the U.S. Virgin Islands, where the majority of folks still  
13 remain without power for more than a month after Hurricane Maria  
14 made landfall.

15           Today's hearing will review the emergency response and  
16 energy recovery efforts in the wake of those storms. It will help  
17 us begin to understand what went right and what went wrong, what  
18 lessons can be learned, and how we, as policymakers, can identify  
19 gaps, so that when the next hurricane hits, we will be better  
20 prepared.

21           As a result of Hurricane Harvey, more than 275,000 customers  
22 lost power in Texas, and severe flooding also affected the supply  
23 and delivery of transportation fuels, compounding response  
24 challenges and energy impacts across the Gulf. Hurricane Irma  
25 left more than a million customers without power across Puerto

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1 Rico and the Virgin Islands. More than 6 million customers in  
2 Florida and another million in Georgia and South Carolina also  
3 lost power. Then, two weeks after Irma, Hurricane Maria  
4 delivered the knockout punch, wiping out the entire grid on Puerto  
5 Rico and the Virgin Islands. At peak, more than 3.5 million folks  
6 were without power.

7 As with most disasters, energy restoration is performed by  
8 federal, state, and local authorities, who provide vital  
9 resources, infrastructure support, and logistical coordination,  
10 and by industry, which provides the expertise and manpower to  
11 restore energy supply and services.

12 As we have witnessed nightly in the news, recovery on the  
13 islands has been painfully difficult and slow. Questions are  
14 mounting regarding the role of the Puerto Rico Electric Power  
15 Authority, PREPA, and its initial reluctance to request mutual  
16 aid from mainland electricity companies that were standing by  
17 ready to assist immediately after the storm. Rather than request  
18 mutual assistance, as Texas and Florida did in the preceding  
19 storms, PREPA took the unusual step to award a contract to a  
20 virtually unknown company which it, then, cancelled. The deals  
21 that PREPA signed immediately following the storm are now the  
22 subject of an investigation by this committee, as they should be.

23 Today we are going to hear from two witness panels which will  
24 provide perspective from the federal level, the state level, and  
25 the industry responder level. As we have seen in recent weeks

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 across the areas affected by the storms, each disaster creates  
2 its own set of problems. Today's witnesses can help us understand  
3 the factors that contribute to these problems and what we may do  
4 to ensure a more effective response going forward.

5 It will also help us understand the challenges that they face  
6 as they move energy and product in the aftermath of devastating  
7 storms. While we have seen alarming devastation, we have also  
8 seen some aspects of the response go right. At this point, by  
9 most accounts, the Department of Energy's support functions have  
10 gone well. DOE's coordination of regulatory assistance, or  
11 waivers, during the disasters has gone well. Their informational  
12 assistance has been consistent and helpful to government and  
13 industry alike.

14 We will hear this morning about the Strategic Petroleum  
15 Reserve, which during Harvey served to provide emergency  
16 petroleum swaps to make up for the temporary loss of supply and  
17 keep prices at the pump somewhat stable.

18 We will also receive an important update on the various  
19 restoration efforts to bring power back to the folks of Puerto  
20 Rico and the Virgin Islands. It will be particularly helpful to  
21 understand what have been the barriers to a more rapid recovery,  
22 what we are learning about coordination of emergency response and  
23 restoration on these territories, and what is needed more from  
24 us, the Congress. How can we apply these lessons going forward?  
25 This hearing should help us answer some of those critical

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1 questions.

2           And I yield now to the ranking member of the subcommittee,  
3 my friend, the gentleman from Illinois, Mr. Rush.

4           [The prepared statement of Mr. Upton follows:]

5

6 \*\*\*\*\* INSERT 1\*\*\*\*\*

1           Mr. Rush. I want to thank you, Mr. Chairman, for holding  
2 this important hearing, examining the 2017 hurricane season and  
3 the emergency response and energy infrastructure recovery efforts  
4 surrounding these emergencies.

5           Mr. Chairman, I hope this will not be a "one and none"  
6 hearing. Folks know in this year's historic and devastating  
7 hurricane season that there are many, many critical interrelated  
8 issues that must be addressed.

9           While I appreciate having witnesses here to discuss the GAO  
10 report that we requested last year, the fact of the matter, Mr.  
11 Chairman, is that, as we speak, there are still many millions of  
12 American citizens living without electricity, and many are facing  
13 dire life-and-death conditions. It is over a month now that  
14 Hurricanes Harvey and Irma and Maria shattered their lives and  
15 devastated their livelihoods.

16           Mr. Chairman, it is my hope that this hearing will shed light  
17 on what additional steps need to be taken quickly to restore power  
18 while also assuring those residents in Puerto Rico and the U.S.  
19 Virgin Island specifically that their government has not  
20 forgotten about them, and that we will provide the exact same  
21 effort and the exact same attention to helping them as we would  
22 for any other American citizen.

23           Mr. Chairman, as you know, more than six weeks after  
24 Hurricane Maria initially made landfall, nearly 70 percent of  
25 Puerto Rico and 80 percent of the U.S. Virgin Islands still, Mr.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Chairman, still lack the power needed for basic everyday services,  
2 such as lighting their homes, treating drinking water, preserving  
3 food and medicine, or even making emergency calls, among other  
4 critical functions that are so necessary to normal and daily  
5 activities.

6 While immediate attention must be focused, Mr. Chairman, on  
7 providing essential resources to protect the safety of  
8 individuals and helping them cope in maintaining their lives, over  
9 the long term we must also help to rebuild the energy  
10 infrastructure in a way that makes it stronger and more resilient  
11 against extreme weather conditions.

12 Mr. Chairman, Hurricanes Irma and Maria exposed the  
13 vulnerability of the Puerto Rico and U.S. Virgin Islands electric  
14 grids to extreme weather, while some communities expected to  
15 remain without power for even months on end. In fact, a study  
16 released last week by the Rhodium Group concluded that the outages  
17 caused by Hurricane Maria resulted in 1.25 million hours of  
18 electricity supplied disruption to a household in Puerto Rico and  
19 the U.S. Virgin Islands, Mr. Chairman, making this sole event the  
20 nation's largest blackout that was ever recorded. We can find  
21 no event in recorded U.S. history where there were as many people  
22 without power for as long as it has occurred over the past month  
23 in Puerto Rico and the U.S. Virgin Islands, the report stated.

24 Mr. Chairman, I look forward to engaging today's  
25 distinguished panel on the progress that has been made, the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 additional steps that must be taken to immediately get the power  
2 grid on, as well as the ways that we build more resilient and  
3 sustainable infrastructure that is less vulnerable to an extreme  
4 weather condition that we have witnessed and that we certainly  
5 will witness in the future.

6 Thank you, Mr. Chairman. I yield back the balance of my  
7 time.

8 Mr. Upton. The gentleman yields back.

9 The Chair now calls upon the chairman of the full committee,  
10 Mr. Walden, for 5 minutes.

11 Mr. Walden. I thank the gentleman and acknowledge his  
12 uniform today.

13 The 2017 hurricane season has been among the worst in recent  
14 memory. Four major storms have wreaked havoc all over our Gulf  
15 Coast and, more recently, in Puerto Rico and the Virgin Islands.  
16 While fuel supplies and electricity have been restored on the  
17 mainland, a humanitarian crisis continues to unfold in Puerto Rico  
18 and the U.S. Virgin Islands, and I think you hear that from both  
19 sides of the aisle here. This is a real, real serious situation  
20 we all care deeply about.

21 As we often do following natural disasters, it is not  
22 uncommon to see stories in the news about heroics and acts of  
23 personal sacrifice and great kindness. We trust that our  
24 policymakers can put aside their differences to do what is in the  
25 best interest of the country. We have already passed initial

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 supplemental disaster relief funding this Congress, but we  
2 understand that much more is needed, and we will continue to work  
3 with the administration and our colleagues, so that our fellow  
4 citizens can get the additional resources they need to recover  
5 and to rebuild.

6 In this committee we roll up our sleeves and we search for  
7 solutions to the various challenges that present themselves after  
8 a major disaster. We want to make sure that the agencies under  
9 our jurisdiction are well-prepared and that you all are responding  
10 appropriately, both now and that we learn from lessons of bad  
11 incidents and are ready and even better prepared for the next storm  
12 or the next disaster.

13 If you are lacking certain authorities, let us know. We  
14 would like to expedite recovery. We want to know about these  
15 things, so that we can help fix them. We are all in this together.

16 We want to be practical and we want to be forward-thinking.  
17 How can we help ensure the relevant federal response is  
18 well-coordinated with state, local, and industry responders?  
19 How do we ensure decisions are made to guarantee taxpayer funding  
20 provides the maximum benefit for those in need and that taxpayers  
21 aren't ripped off? If we need to rebuild, what can we do to make  
22 our infrastructure more resilient?

23 Because of this committee's broad jurisdiction over public  
24 health, emergency telecommunications, and the supply and delivery  
25 of energy, we will be gathering facts, perspectives, and lessons

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1 learned. We have already heard from witnesses on our Oversight  
2 and Investigation Subcommittee hearing about HHS's public health  
3 preparedness for and responses to the hurricanes. We will soon  
4 examine the disaster response related to environmental hazards  
5 and telecommunications as well.

6 But today we are focusing on emergency response and energy  
7 infrastructure recovery, both for fuel supply and the electric  
8 grid. This year we have already been confronted with several  
9 different challenging situations, historic flooding in Houston,  
10 possibly the greatest evacuation in Florida's history, an energy  
11 crisis in Puerto Rico and the U.S. Virgin Islands that could leave  
12 millions without power for estimated months to come.

13 We may take for granted how lucky we are that we can flip  
14 a switch and the lights come on. For our citizens in Puerto Rico  
15 and the U.S. Virgin Islands, however, almost every aspect of their  
16 lives has been deeply disrupted. Hospitals without external  
17 generators cannot serve their patients. Getting that power  
18 restored is critical. Water treatment plants without power  
19 threaten the health of individuals that rely on them for safe  
20 water. And those who live in remote areas that do not have access  
21 to fuel are cut off even from the most basic of necessities.

22 The witness panel today will provide important perspectives  
23 about the state of current fuel and electric supply recovery  
24 efforts, what worked, what could be done better under urgent  
25 circumstances of the hurricanes, and what may be considered in

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 the future. I expect this will be an excellent hearing for us  
2 to identify vulnerabilities and assess what is needed to better  
3 prepare and respond to future storms and disasters.

4 And with that, I want to thank you for being here today. I  
5 appreciate the testimony which you have already submitted that  
6 I have, and thanks for the good work you and your teams are doing  
7 out there. We really want to learn from you and be even better  
8 prepared when the next disaster hits.

9 So, with that, Mr. Chairman, unless anybody else on our side  
10 seeks the remaining minute, I would yield back.

11 Mr. Upton. I just might ask a question of the Vice Chair  
12 of the committee. Are you intending to wear that jersey on the  
13 House Floor when we take the picture of the full House this  
14 afternoon?

15 Mr. Olson. Chairman, that is not an issue. I tried to wear  
16 this about three weeks, and it was banned. So, this will not be  
17 in the picture --

18 Mr. Upton. All right.

19 Mr. Olson. -- much to your disappointment, I can tell.

20 Mr. Upton. I just was curious because, then, we would always  
21 be able to find you forever, right, in that picture?

22 [Laughter.]

23 Mr. Walden. Now, Mr. Chairman, I yield back the balance of  
24 my time.

25 Mr. Upton. Yes, the gentleman yields back.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 I recognize the ranking member of the full committee, Mr.  
2 Pallone from New Jersey, for an opening statement.

3 Mr. Pallone. Thank you, Mr. Chairman, for convening today's  
4 hearing reviewing the disastrous 2017 hurricane season which has  
5 wreaked havoc on many parts of our country.

6 And I am grateful to former Senator Nieves of Puerto Rico  
7 and Mr. Rhymer of the Virgin Islands for coming here today. I  
8 guess they are on the second panel.

9 But I am disappointed that the committee did not even receive  
10 a response to its outreach to the Puerto Rico Electric Power  
11 Authority, or PREPA. I have serious concerns not only about how  
12 PREPA has overseen the effort to restore power in Puerto Rico,  
13 but also, more broadly, on how PREPA has managed or, more  
14 accurately, mismanaged the grid in Puerto Rico over the years.

15 Now today we are focusing on the energy infrastructure  
16 recovery efforts. I must say that accounts from the areas  
17 affected by these storms paint a dire situation that completely  
18 contradicts the often rosy stories that come from the White House.  
19 The truth is that, taken together, Puerto Rico and the Virgin  
20 Islands are currently experiencing the largest blackout in  
21 American history, and this nightmare for our fellow citizens is  
22 far from over.

23 The central question for us today should be, why is it taking  
24 so long to restore power in Puerto Rico and the Virgin Islands,  
25 and who is actually in charge of the effort to restore power to

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1 Puerto Rico? No one person or entity seems to be in charge, and  
2 it is fostering a chaotic and ineffective effort to restore power  
3 on the island. And I want answers, and so do many of my colleagues  
4 on both sides of the aisle.

5 I am also troubled by the maze of contracts with numerous  
6 companies for overlapping missions, a patchwork that is failing  
7 to turn the lights back on in Puerto Rico. And that needs to  
8 change now. I am deeply concerned by the terms of the contract  
9 PREPA signed with Whitefish and Cobra Acquisitions, which went  
10 so far as to bar PREPA from holding the companies liable for  
11 delayed completion of grid repair work or letting the government  
12 audit their work. Now Governor Rossello has since taken steps  
13 to have the Whitefish contract cancelled, but we need to learn  
14 more about how these contracts are being awarded and whether the  
15 bidding process is truly competitive. That is why Chairmen  
16 Walden and Upton and Ranking Members Rush and I have requested  
17 documents and a briefing from Whitefish, so we can learn more about  
18 how that troubling agreement materialized.

19 Additionally, FEMA issued a statement that said it had no  
20 involvement in the development of this contract. Well, my  
21 question is, why not? The federal government should be engaged  
22 in the contracting process of large-scale rebuilding contracts  
23 for which U.S. taxpayers will ultimately foot the bill. The  
24 federal government needs to step up and take charge to expedite  
25 power restoration efforts. Missions like this are why we have

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 a strong federal government. And simply put, the Trump  
2 administration needs to be doing more. If we can't get the power  
3 turned back on soon, more people are going to die. This is a  
4 humanitarian crisis, and our government owes it to the citizens  
5 in these territories to do everything it can to fix it.

6 And while restoring power quickly is the most urgent concern,  
7 it is also crucial that the grid in Puerto Rico and the U.S. Virgin  
8 Islands be rebuilt with more modern energy technology focused on  
9 increased resiliency, energy efficiency, and renewable energy.  
10 Replacing the old grid as it stood before the storm will cost  
11 taxpayers more money and do nothing to make electricity in Puerto  
12 Rico more reliable or affordable.

13 So, as Congress prepares the next emergency spending bill,  
14 we must make changes to the current law to enable the rebuilding  
15 to occur in a way that lays the groundwork for constructing a  
16 modern electricity grid in the territories. Failing to invest  
17 wisely in Puerto Rico now will only cost all taxpayers more down  
18 the road. And we must consider innovative ways for turning around  
19 Puerto Rico's situation, including alternatives to PREPA for  
20 overseeing the rebuilding and operation of the grid, and all ideas  
21 from privatization, which I am not really a fan of, but from  
22 privatization to creation of a new Federal Power Marketing  
23 Administration. All these things have to be up for discussion.  
24 And whatever road we go down must have buy-in from the Puerto Rican  
25 people and the government.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 I don't know if anybody wants my minute that I still have.  
2 If not, Mr. Chairman, I will yield back.

3 Mr. Upton. The gentleman yields back.

4 At this point we are ready for the testimony. Thank you in  
5 advance or thank you for sending your testimony in advance. It  
6 will be made part of the record. We would like each of you to  
7 take no more than 5 minutes to summarize your testimony. At that  
8 point when that is completed, we will be asking questions.

9 We are joined first by Patricia Hoffman, the Acting  
10 Undersecretary for Science and Energy, Principal Deputy Assistant  
11 Secretary for the Office of Electricity Delivery and Energy  
12 Reliability, at the Department of Energy. Welcome. Thank you.

1 STATEMENTS OF PATRICIA HOFFMAN, ACTING UNDERSECRETARY FOR SCIENCE  
2 AND ENERGY, PRINCIPAL DEPUTY ASSISTANT SECRETARY FOR THE OFFICE  
3 OF ELECTRICITY DELIVERY AND ENERGY RELIABILITY, U.S. DEPARTMENT  
4 OF ENERGY; RAY ALEXANDER, DIRECTOR OF CONTINGENCY OPERATIONS,  
5 U.S. ARMY CORPS OF ENGINEERS; DEANN WALKER, CHAIRMAN, PUBLIC  
6 UTILITY COMMISSION OF TEXAS; ROBERT CORBIN, DEPUTY ASSISTANT  
7 SECRETARY FOR THE OFFICE OF PETROLEUM RESERVES, U.S. DEPARTMENT  
8 OF ENERGY, AND FRANK RUSCO, DIRECTOR, NATURAL RESOURCES AND  
9 ENVIRONMENT, GOVERNMENT ACCOUNTABILITY OFFICE

10  
11 STATEMENT OF PATRICIA HOFFMAN

12 Ms. Hoffman. Chairman Upton, Ranking Member Rush, and  
13 distinguished members of the subcommittee, I appreciate the  
14 opportunity today to discuss energy security and emergency  
15 response issues related to the 2017 hurricane season.

16 The mission of the Office of Electricity Delivery and Energy  
17 Reliability is to develop innovative, cutting-edge solutions to  
18 ensure our nation's energy infrastructure remains reliable,  
19 affordable, and resilient. In order to fulfill this mission, the  
20 Department of Energy leverages the technical capabilities of  
21 National Laboratories and partnerships with the key private  
22 sector stakeholders to focus on early-stage research and  
23 transformative projects.

24 Our organization is also the lead for providing  
25 energy-related expertise to the Federal Energy Management Agency,

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 also known as FEMA, our interagency partners, and the  
2 administration, as part of the Department of Energy's emergency  
3 response activities. DOE serves as the lead organization for  
4 Emergency Support Function 12 under the National Response  
5 Framework and as the sector-specific agency for energy. As the  
6 lead for ESF-12, DOE is responsible for providing information and  
7 analysis about energy disruptions and to assist in facilitating  
8 the restoration of damaged energy infrastructure.

9         During Hurricanes Harvey, Irma, Maria, Nate, we have worked  
10 with industry and the federal, state, territorial, and local  
11 partners to facilitate response and recovery. Overall, DOE has  
12 received 18 mission assignments and has deployed more than 110  
13 personnel to the response efforts. Each of these storms has  
14 presented unique challenges to the energy sector.

15         With respect to Hurricane Harvey, we saw peak electricity  
16 outages of about 300,000 customers in Texas and Louisiana. While  
17 offshore and onshore, crude oil and natural gas productions were  
18 disrupted by the storm, the greatest impacts were to the midstream  
19 and downstream oil and refining sectors. At its peak, more than  
20 4 million barrels per day of refining capacity, representing more  
21 than 20 percent of the U.S. refining capacity, was offline. It  
22 took several weeks for floodwaters to recede, but the refining  
23 systems in Texas and Louisiana have resumed normal operations.  
24 In addition, flooding closed two key injection points along the  
25 Colonial Pipeline, forcing the system to operate intermittently

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 at reduced rates for several weeks before normal service was  
2 resumed.

3 Hurricane Irma, the second category 4 hurricane to make  
4 landfall in the United States this year, caused approximately 8  
5 million electric customer outages from the Caribbean to the  
6 southeastern United States. At Irma's peak on September 11th,  
7 there were approximately 7.8 million customer outages in Florida.  
8 Three days later, on September 14th, power had restored to  
9 approximately 5 million customers, 64 percent of those customers.  
10 And five days later, restoration was at 98 percent.

11 DOE is also playing a significant role in supporting the  
12 restoration and recovery efforts in the U.S. Virgin Islands and  
13 Puerto Rico from Hurricane Maria. In Puerto Rico, the U.S. Army  
14 Corps does have the primary role in emergency restoration and  
15 rebuilding the infrastructure, but DOE has deployed personnel and  
16 equipment from the Western Power Area Administration to provide  
17 mutual assistance through a mission assignment from FEMA and is  
18 working to facilitate additional mutual assistance with industry.

19 Days after Bruce Walker was confirmed as the Department of  
20 Energy's new Assistant Secretary for the Office of Electricity  
21 Delivery and Energy Reliability, he was on the ground in Puerto  
22 Rico assisting other DOE personnel in coordination with the  
23 governor, PREPA, FEMA, and the Army Corps of Engineers.  
24 Recently, the governor and PREPA have requested additional line  
25 workers and equipment necessary for the restoration of power.

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Secretary Perry and our DOE team look forward to a thoughtful  
2 conversation focused on our response and recovery efforts for this  
3 hurricane season, and a focus on reliability, affordability, and  
4 resilience of the electricity system from hurricanes as well as  
5 other extreme weather events.

6 I would like to take a moment and thank the hard utility  
7 workers for their time and their efforts in responding to the  
8 hurricane season. But, like any event, there is always some hard  
9 lessons learned, and we look forward to improving our efforts.

10 So, thank you, and I look forward to your questions.

11 [The prepared statement of Ms. Hoffman follows:]

12  
13 \*\*\*\*\* INSERT 2\*\*\*\*\*

1 Mr. Upton. Thank you very much.

2 Next, we're joined by Ray Alexander, the Director of  
3 Contingency Operations for the Corps of Engineers.

4 Welcome.

1 STATEMENT OF RAY ALEXANDER

2

3 Mr. Alexander. Chairman Upton, Ranking Member Rush, and  
4 members of the subcommittee, my name is Ray Alexander, Director  
5 of Contingency Operations, the U.S. Army Corps of Engineers.  
6 Thank you for the opportunity to testify today.

7 The Corps conducts emergency response activities under two  
8 basic authorities, the Stafford Act and Public Law 84-99. Under  
9 the Stafford Act, we support FEMA under the National Response  
10 Framework as the lead federal agency for Emergency Support  
11 Function 3, public works and engineering. ESF-3 provides  
12 temporary emergency power, roofing, and housing, debris  
13 management, infrastructure assessment, and critical public  
14 facility restoration.

15 Under Public Law 84-99, we prepare for disasters through  
16 planning, coordination, and training with local, state, and  
17 federal partners. We assist state and local entities to  
18 implement advanced measures that prevent or reduce storm event  
19 damages. We repair damage to authorized federal projects and  
20 work with states and municipalities to rehabilitate and restore  
21 eligible non-federal flood infrastructure to pre-storm  
22 conditions.

23 When disasters occur, core teams and resources are mobilized  
24 from across the command to assist local offices with their  
25 response to the event. As part of this mission, the Corps has

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

www.nealrgross.com

1 more than 50 specially-trained teams supported by emergency  
2 contracts that perform the wide range of support missions I just  
3 described. These contracts are pre-awarded and can be quickly  
4 activated to execute many of these missions.

5 This year the Corps has supported FEMA-led federal response  
6 and recovery operations in multiple events, including Hurricanes  
7 Harvey, Irma, and Maria. FEMA directed 37 mission assignments  
8 to the Corps for Hurricane Harvey. Currently, the Corps has 195  
9 employees deployed. The Corps assisted in temporary emergency  
10 power and continues to support the state of Texas in the  
11 development and implementation of a temporary housing project  
12 management plan. Debris teams led by subject matter experts  
13 continue provide state and municipalities the technical  
14 assistance to define requirements and monitor debris removal and  
15 disposal operations in 15 counties.

16 FEMA directed 81 mission assignments to the Corps for  
17 Hurricanes Irma and Maria. Currently, the Corps has over 1500  
18 personnel deployed. As of this morning, the Corps has completed  
19 over 1,000 assessments and over 500 temporary generator  
20 installations in the Caribbean. This includes 250 assessments  
21 and 150 installations in the U.S. Virgin Islands and over 750  
22 assessments and 400 installations in Puerto Rico. Under FEMA  
23 authority, we are assisting Puerto Rico with the operation and  
24 maintenance of critical non-federal generators across the island  
25 as well.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           The Corps has completed over 14,000 temporary roofing  
2 installations in Florida and is on track to complete that mission  
3 by 4 November. We have also completed over 7,000 temporary  
4 roofing installations in the Caribbean, including over 2500 in  
5 the U.S. Virgin Islands and 4700 in Puerto Rico. Roofing  
6 requirements have been extensive, requiring additional material  
7 and construction support, which initially slowed progress. We  
8 have adjusted. We have added additional capacity, and we are  
9 seeing daily improvements.

10           Corps debris subject matter experts provided technical  
11 assistance to counties across Florida and Georgia in response to  
12 Hurricane Irma, and continue to provide oversight to five regions  
13 within the Florida Department of Emergency Management. The Corps  
14 is working to remove an estimated 1 million cubic yards of debris  
15 in the U.S. Virgin Islands and over 6 million cubic yards in Puerto  
16 Rico.

17           The Corps works closely with the U.S. Coast Guard and the  
18 National Oceanic and Atmospheric Administration and local  
19 authorities to open harbors and navigation channels across all  
20 affected areas, critical to restoring commerce and the flow of  
21 commodities, and essential equipment to reach affected  
22 communities.

23           The Corps worked closely with officials of Texas and Florida  
24 to manage local flood control reservoirs during a period of  
25 unprecedented rainfall. In Puerto Rico, Corps dam and levy teams

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

[www.nealrgross.com](http://www.nealrgross.com)

1 inspected 17 priority dams and worked closely with the Puerto Rico  
2 Electrical Power Authority, PREPA, to stabilize a spillway  
3 feature, the Guajataca Dam. Additionally, the Corps cleared  
4 existing outflow conduits and placed emergency pumps to further  
5 reduce water levels in the dam that restore flow to a critical  
6 treatment plant that supports the needs of over 30,000 people.

7 On September 30th, the Corps received a FEMA mission  
8 assignment under Stafford Act authority to assist PREPA in  
9 conducting emergency repairs to the power grid itself. We are  
10 partnering with PREPA. We have established a general officer,  
11 senior-executive-led task force to oversee work and provide  
12 technical assistance.

13 The Department of Energy has embedded experts in our team  
14 and continues to assist in our efforts. Within two weeks of  
15 receiving this mission assignment, we awarded contracts for  
16 large-scale temporary power generation to stabilize the grid in  
17 San Juan and for additional line repair assets that will assist  
18 ongoing efforts by PREPA.

19 The Corps remains fully committed and capable of executing  
20 other civil works activities across the nation, despite our heavy  
21 involvement in these ongoing response and recovery operations.  
22 We also remain ready and poised to assist in future events, should  
23 they occur.

24 This concludes my testimony, and I look forward to answering  
25 any questions you may have. Thank you.

WASHINGTON, D.C. 20005-3701

1  
2  
3

[The prepared statement of Mr. Alexander follows:]

\*\*\*\*\* INSERT 3\*\*\*\*\*

1 Mr. Upton. Thank you very much.

2 Next is DeAnn Walker, the Chair of the Public Utility  
3 Commission for Texas. You have got to be a happy woman today as  
4 well with the Astros.

1 STATEMENT OF DEANN WALKER

2

3 Ms. Walker. Yes. Thank you very much for your invitation  
4 to appear here today.

5 My name is DeAnn Walker. I am the Chairman of the Public  
6 Utility Commission of Texas. I have happily held that seat since  
7 September 20th. So, I am new to this.

8 I believe I have a unique perspective on restoration from  
9 hurricanes. The State Operations Center in Texas creates what  
10 they call a Tiger Team of utility personnel that is located within  
11 the State Operations Center to help with restoration, to  
12 coordinate with federal/state officials throughout an event. I  
13 have now served three hurricanes in the State Operations Center.  
14 Hurricane Rita and Hurricane Ike, I was actually representing a  
15 utility in the State Operations Center. During Hurricane Harvey,  
16 I was working for Governor Abbott and was down in the State  
17 Operations Center working with the utilities to restore service.

18 We believe that the electric industry and the infrastructure  
19 in Texas fared very well during Hurricane Harvey compared to past  
20 hurricanes. As has been stated, we had under 350,000 at any one  
21 time. We had more than that, but the utilities were continually  
22 restoring service during that time. The longest we had any  
23 customers out was for two weeks, and that was in the Rockport area,  
24 which was the direct hit of the eye of Hurricane Harvey. So, it  
25 took the brunt of it. During a storm, the PUC, as I said, works

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS

WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 with state, federal, and local agencies to restore power.

2 I wanted to focus the rest of my time on what we are taking  
3 as action items to better prepare for a new hurricane. Due to  
4 the amount of flooding that we had, some cities and towns, areas  
5 received 60 inches of rain throughout Hurricane Harvey. Many  
6 substations in our area flooded for the first time ever. So, we  
7 are looking at, and we moved in for the first time ever, mobile  
8 substations to help serve those customers. We are looking at  
9 whether or not it is prudent for the state as a whole, all of the  
10 utilities to get together and purchase these mobile substations  
11 to have on hand in such an event. We are also working with the  
12 utilities to elevate those substations when they rebuild them,  
13 so that we are taking care of hardening the system in the process  
14 of rebuilding.

15 I have also asked the state to look at whether or not we can  
16 better utilize utilities within Texas to send equipment and  
17 personnel. We were drawing people from all over the United States  
18 under mutual assistance crews, which we greatly appreciate, but  
19 I would like us to look and see if we can rely on the Texans that  
20 we have. SPS in the Panhandle and El Paso in far west Texas never  
21 were called on to help, and obviously, they were closer than a  
22 lot of places.

23 We have been working through the process with FEMA for how  
24 to interconnect their temporary housing, so that we could have  
25 one seamless process for all utilities to implement. We are

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 trying to do that on the fly. I would like us to further address  
2 that process in the meantime before the next storm hits us.

3 We also learned that not every utility is reporting outages  
4 consistently. In Texas we require that all utilities report  
5 outages to us and to DOE on a county- and ZIP-code-wide basis,  
6 but there is not consistency between the utilities on how that  
7 was being done. For instance, some of the flooded substations,  
8 once they had a plan to bring in the mobile substation, they took  
9 those outages and moved them to planned outages. So, they were  
10 no longer showing up as being impacted by the hurricane. I don't  
11 think that is an accurate representation. So, I have asked to  
12 look at that.

13 There are many other things that we have started looking at  
14 to correct and to, hopefully, do better. I am running out of time.  
15 I wanted to, again, thank you for your time today.

16 [The prepared statement of Ms. Walker follows:]

17  
18 \*\*\*\*\* INSERT 4\*\*\*\*\*

1 Mr. Upton. Thank you.

2 Next, we are joined by Robert Corbin, Deputy Assistant  
3 Secretary for the Office of Petroleum Reserves, the U.S.  
4 Department of Energy.

1 STATEMENT OF ROBERT CORBIN

2

3 Mr. Corbin. Chairman Upton, Ranking Member Rush, and  
4 distinguished members of the subcommittee, it is an honor to  
5 appear before you today to discuss the Strategic Petroleum  
6 Reserve.

7 The Strategic Petroleum Reserve, or SPR, was established  
8 under the authority of the Energy Policy and Conservation Act in  
9 December 1975. At that time U.S. oil production was in decline,  
10 oil price and allocation controls separated the U.S. oil market  
11 from the rest of the world, and the global commodity market for  
12 oil as we know it now did not exist.

13 Today the global oil market has changed the environment in  
14 which the SPR operates. Although domestic oil production has  
15 increased dramatically in recent years, the global oil market is  
16 the largest commodity market in the world, making U.S. consumers  
17 subject to global commodity price fluctuations. Regardless of  
18 U.S. oil import levels, a severe global oil supply disruption  
19 today would impact domestic petroleum product prices.

20 In the event of a serious international oil supply  
21 disruption, offsetting disrupted supplies with SPR crude oil in  
22 concert with other countries that hold strategic oil stocks can  
23 help reduce an increase in international oil prices and the  
24 resulting adverse economic impacts that could otherwise occur.

25 The SPR maintains and operates four major oil storage sites,

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1 two in Texas and two in Louisiana. The SPR's current crude oil  
2 inventory is approximately 670 million barrels stored in 60  
3 underground salt caverns with a design capacity of 713.5 million  
4 barrels. The SPR is designed to provide the capability to draw  
5 down and deliver crude oil from the storage sites to designated  
6 distribution points, a design drawdown rate of 4.415 million  
7 barrels per day. The SPR can physically begin to draw down crude  
8 oil in as little as two days of notification, and taking into  
9 account the time required to meet sales requirements and draw down  
10 and deliver crude oil within 13 days of a presidential finding.  
11 SPR operating costs are less than 25 cents per barrel of design  
12 capacity per year, the lowest reported cost among oil  
13 stock-holding nations.

14 As a member of the International Energy Agency, or IEA, the  
15 U.S. has two primary oil stock-holding obligations. As a net oil  
16 importer, the U.S. must maintain oil stock-holding inventories  
17 equal to at least 90 days of net petroleum imports. As of June  
18 30th, 2017, the U.S. held 149 days of net petroleum imports.

19 The U.S. must also be able to contribute a proportionate  
20 share to an IEA collective action in response to an oil supply  
21 disruption, based on its percentage share of IEA oil consumption.  
22 As of June 30th, 2017, the U.S. must contribute 43.2 percent of  
23 all barrels released during any IEA collective action.

24 As global oil trade increases, the potential role of the SPR  
25 to help mitigate global supply disruptions expands, regardless

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 of the level of U.S. net oil imports. Without the ability to  
2 replace disrupted oil supplies in the global market, global oil  
3 prices could increase significantly and the U.S. and global  
4 economy could be harmed.

5 SPR infrastructure has performed capability to ensure the  
6 SPR has been able to respond to every emergency release situation  
7 presented throughout its history. However, SPR facilities are  
8 aging. A significant amount of infrastructure components are at  
9 or beyond their design life, and equipment will be further  
10 stressed due to nine consecutive years of  
11 congressionally-mandated crude oil sales.

12 Congress, recognizing the need to modernize SPR  
13 infrastructure, included provisions in the Bipartisan Budget Act  
14 of 2015 to address this concern by authorizing the drawdown and  
15 sale of up to \$2 billion worth of SPR crude oil over a four-year  
16 period to carry out an SPR modernization program. In response,  
17 the SPR has initiated a major capital asset acquisition project  
18 to modernize aging SPR infrastructure for systems upgrades and  
19 equipment replacement to ensure the SPR can meet mission  
20 requirements for the next several decades.

21 Hurricane Harvey severely impacted U.S. Gulf Coast crude oil  
22 infrastructure, closing refineries, ports, and supply pipelines.  
23 Many impacted refiners were operable following the passage of  
24 Harvey, but in some cases were unable to secure crude oil feedstock  
25 to recommence or continue operations, resulting in multiple

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1 requests for emergency exchanges of SPR crude oil. After  
2 assessing prevailing supply conditions and consulting with other  
3 federal agencies regarding the status of crude oil  
4 infrastructure, the SPR received approval from the Secretary of  
5 Energy to execute six emergency exchange agreements. First  
6 deliveries of crude oil were provided on August 30th, just two  
7 days after the initial request was received. Deliveries to the  
8 remaining companies also commenced within days after those  
9 requests were received and continued until deliveries totaling  
10 5 million barrels were completed on September 28th. These  
11 emergency exchanges helped alleviate the loss of crude oil supply,  
12 allowing the affected refiners to begin and/or continue  
13 operations that otherwise would have been halted due to the  
14 impacts of Hurricane Harvey.

15 This concludes my statement. Thank you for the opportunity  
16 to speak with you today about the SPR, and I look forward to  
17 answering any of your questions.

18 [The prepared statement of Mr. Corbin follows:]

19 \*\*\*\*\* INSERT 5\*\*\*\*\*

1           Mr. Upton. Thank you very much.

2           Lastly, on the first panel we are joined by Frank Rusco,  
3 Director of the Natural Resources and Environment from the GAO.  
4 Welcome.

## 1 STATEMENT OF FRANCO RUSCO

2  
3 Mr. Rusco. Chairman Upton, Ranking Member Rush, and members  
4 of the subcommittee, thank you for the opportunity to discuss our  
5 past and ongoing work on energy resilience and particularly the  
6 effectiveness of the Strategic Petroleum Reserve in responding  
7 to domestic petroleum supply disruptions caused by extreme  
8 weather and other events.

9 The SPR was created at a time when global oil supply was  
10 dominated by OPEC and oil markets were characterized by long-term  
11 contracts with fixed prices. At that time a global oil supply  
12 disruption, as occurred during the Arab oil embargo, had the  
13 effect of physical oil shortages and in the United States and  
14 elsewhere long lines at the gas pump. It made sense at the time  
15 for the SPR to be comprised of crude oil centrally held in cheap  
16 salt dome storage in Louisiana and Texas, near the nation's  
17 largest refining centers.

18 Today global oil markets are robust, and prices change to  
19 accommodate supply and demand, so that physical shortages and long  
20 lines are less of an issue. In addition, the use of the SPR has  
21 been primarily in response to domestic supply disruptions,  
22 particularly those caused by extreme weather events, rather than  
23 global supply shortages. My remarks will focus on how well the  
24 SPR is able to respond to these domestic supply disruptions.

25 The SPR has been partially successful in responding to

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 domestic supply disruptions in instances when Gulf Coast  
2 refineries and pipelines are operational but crude oil supplies  
3 to these refineries have been disrupted. For example, this year  
4 following Hurricane Harvey the SPR was able to supply several  
5 refineries with crude oil by pipeline while shipping ports were  
6 closed.

7 However, the SPR has been less effective in responding to  
8 reductions in petroleum products in the rest of the country, as  
9 has occurred multiple times when hurricanes have shut down  
10 refineries or shut down power to other petroleum infrastructure.  
11 In this latter cases, including following Hurricane Harvey when  
12 as much as 34 percent of the Gulf Coast refining capacity was shut  
13 in, the real supply problem was gasoline, diesel, and jet fuel,  
14 and the SPR has only a small reserve of gasoline in the Northeast  
15 and no other petroleum product reserves. As a result, the SPR  
16 cannot provide needed petroleum products to Florida, the Eastern  
17 Seaboard, and other regions typically supplied by Gulf Coast  
18 refiners.

19 DOE has recognize the desirability of having regional  
20 reserves of petroleum products. For example, in 2014, DOE  
21 identified five regions that are vulnerable to petroleum product  
22 supply disruptions. These include the West Coast, which is  
23 vulnerable to earthquakes and tsunamis, parts of six Midwestern  
24 states vulnerable to earthquakes, a number of states vulnerable  
25 to extreme cold weather, and the entire coast from Texas up to

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Massachusetts that is vulnerable to hurricanes.

2 With the exception of the small gasoline reserves held in  
3 the Northeast, there are no other petroleum product reserves held  
4 by the SPR in any of these vulnerable regions. Further, while  
5 DOE has recognized these vulnerabilities and conducted some  
6 studies of alternatives to the current composition and  
7 configuration of strategic reserves, it has not completed these  
8 studies. As a result, DOE cannot determine the efficacy of  
9 creating regional petroleum product reserves.

10 In contrast to how the SPR is configured, most other  
11 countries with strategic reserves have chosen to hold significant  
12 quantities of petroleum products in addition to crude oil, and  
13 some have chosen to spread these reserves out across their  
14 countries to be closer to centers of demand. For example, Germany  
15 chooses to hold about 55 percent of its strategic stocks as  
16 petroleum products. France spreads its reserves across seven  
17 geographic zones that enable it to distribute petroleum products  
18 to distribution networks all over the country.

19 The United States has benefitted from European strategic  
20 stocks of petroleum products during past hurricane damage to Gulf  
21 Coast refining and production infrastructure. For example, in  
22 response to Hurricane Katrina in 2005, as prices of gasoline rose  
23 across the United States, shipments of gasoline from Europe began  
24 arriving on the East Coast within days. This mitigated the  
25 economic effects of the hurricane-caused refinery and oil

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 production shutdowns.

2 As DOE undertakes a modernization program of its existing  
3 systems, this committee and others have requested that we  
4 undertake an evaluation of the SPR, its size, composition,  
5 location of reserves, and options for improving its  
6 effectiveness. We will report our findings in the next few  
7 months.

8 Thank you. This concludes my oral remarks. I will be happy  
9 to answer any questions you may have.

10 [The prepared statement of Mr. Rusco follows:]

11

12 \*\*\*\*\* INSERT 6\*\*\*\*\*

1           Mr. Upton. Well, thank you all. At this point we will move  
2 to questions from the dais.

3           Mr. Alexander, you said in your testimony that the Corps is  
4 overseeing the work that is done by PREPA in Puerto Rico. I would  
5 like to ask the question, how has that gone? Because this  
6 subcommittee has tried to contact PREPA both by email and phone.  
7 They are not answering. There is not heartbeat that we are  
8 getting back. So, how has that oversight gone?

9           Mr. Alexander. Sir, perhaps I misstated. We have a task  
10 force -- again, general officer, senior-executive-led -- that is  
11 overseeing our mission to restore the grid, as assigned by FEMA.  
12 What we are doing with PREPA, though, is we are working in  
13 coordination and collaboration with them, so that we can have  
14 well-defined, focused areas of operation. So, we are not working  
15 in each other's area and we ensure that there are no gaps. We  
16 are only working with PREPA; we are not working for PREPA, but  
17 we are working in coordination with PREPA.

18           The oversight of the Corps' mission assignment we believe  
19 is going well. Again, we were assigned this mission on 30  
20 September. Within 18 days, we were able to award three major  
21 contracts, one for temporary power generation, 230-megawatt power  
22 plants to put in the vicinity, the Palo Seco Power Plant near San  
23 Juan, and restore the power grid around San Juan. Those  
24 generators have arrived. They have been installed, and we have  
25 additional load on the grid in the greater San Juan area as of

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 several days ago.

2 The other two contracts focused on line repair, transmission  
3 distribution/line repair. A larger contract to Fluor, a \$240  
4 million contract. They have boots on the ground today. They are  
5 conducting assessments. They are starting to have crews  
6 arriving. I believe, as I said in my testimony, we are ramping  
7 up quickly, 620 by the end of this weekend, and that number will  
8 double by mid-November.

9 And then, we also have a company named PowerSecure. They  
10 are fully engaged and will be. They, too, have assessment teams  
11 on the ground. Their equipment is actually en route by sea now  
12 on a MARAD, Ready Reserve Fleet vessel that should arrive at Ponce  
13 port on 3 November.

14 Mr. Upton. Did the Corps have any advance knowledge of  
15 working with PREPA prior to the contract that they established  
16 with Whitefish and Cobra? Were you aware of that contract before  
17 it was signed?

18 Mr. Alexander. No, sir, we were not. We were engaged in  
19 our temporary power mission under the Stafford Act, and we have  
20 been working that since the 6th of September. The news that PREPA  
21 had independently committed in a contract to another company, we  
22 were not consulted; we were not aware.

23 Mr. Upton. You indicated in your written testimony that the  
24 temporary housing plan includes establishing -- this is as it  
25 relates to Texas -- 20,000 travel trailers and 4,000 mobile

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 housing units. I presume that most of those are for folks that  
2 were actually displaced, homeowners or families that were  
3 displaced. Do you know what that number is for Puerto Rico? It's  
4 20,000 for Texas. Do you know what the number would be for Puerto  
5 Rico?

6 Mr. Alexander. No, I do not, sir.

7 Mr. Upton. Ms. Hoffman, I have met with a number of  
8 pharmaceutical/medical device companies, many with very large  
9 operations in Puerto Rico. We are all aware of the critical need  
10 to get those facilities back online. It is a public health  
11 priority because it is so critical for patients to ensure that  
12 their products that are being manufactured there don't go into  
13 a shortage. How are you incorporating medical manufacturing in  
14 an approach to restore the grid in Puerto Rico?

15 Ms. Hoffman. So, thank you.

16 Critical infrastructure, critical loads on an electric  
17 system is very important, utilities. In our conversation with  
18 the utilities, with FEMA and the interagency partners, we  
19 discussed what are some of those priority restoration efforts and  
20 helping with the communications, so that we understand where some  
21 of those needs are and where some of the activities should be with  
22 respect to restoration processes. So, those coordinations occur  
23 with FEMA and with the local utilities in the territory itself.

24 Mr. Upton. Okay. Thank you. My time has expired.

25 I recognize the ranking member of the subcommittee, Mr. Rush,

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 for 5 minutes.

2 Mr. Rush. I want to thank you, Mr. Chairman.

3 Mr. Alexander, I am kind of curious, not "kind", I am very  
4 curious about your Army Corps of Engineers' lack of information  
5 about this Whitefish contract. You, the Army Corps of Engineers,  
6 were unaware of this contract, is that correct?

7 Mr. Alexander. Yes, sir.

8 Mr. Rush. The governor says he was unaware of this contract.

9 Mr. Alexander. I'm sorry, sir, did you say --

10 Mr. Rush. The governor of Puerto Rico has stated publicly  
11 that he was unaware of this contract.

12 Mr. Alexander. The governor of Puerto Rico said he was  
13 unaware?

14 Mr. Rush. Right.

15 Mr. Alexander. Sir, I am not privy to that. I do not know.

16 Mr. Rush. Are you aware that this contract is being  
17 cancelled or has been cancelled?

18 Mr. Alexander. Sir, I understand that the governor has  
19 given the direction to terminate that contract. Whitefish and  
20 other contractors, they are completing the task, the last task  
21 they have been assigned. So, they are still working on the  
22 island.

23 Mr. Rush. Do you have any information about who executed  
24 that contract?

25 Mr. Alexander. No, I do not.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Mr. Rush. Do you trust PREPA? Do you trust them?

2 Mr. Alexander. Sir, I have no reason not to. Again, we are  
3 working in collaboration with them on restoring the power.

4 Mr. Rush. Do you have any estimate in terms of how much  
5 additional dollars the cancellation of this contract will cost  
6 the American people?

7 Mr. Alexander. No, I do not.

8 Mr. Rush. All right. Secretary Hoffman, the economic  
9 consulting firm Rhodium Group concluded that Maria cost 1.25  
10 billion hours of electricity supply disruption to households,  
11 which they say is the longest disruption in recorded history. Do  
12 you concur with their finding?

13 Ms. Hoffman. I will have to look at the information, but  
14 it is a significant duration for outage for Puerto Rico.

15 Mr. Rush. And what is the best estimate on when power will  
16 be fully restored to both the U.S. Virgin Islands and Puerto Rico?

17 Ms. Hoffman. So, that is information that the governor as  
18 well as PREPA is looking at, as well as partnerships with the Army  
19 Corps of Engineers, on the supplies that are needed, the resources  
20 that are required for restoring power. Some initial indications  
21 are that for, I would say 50 percent -- I believe the Army Corps  
22 has estimated that 50 percent of the island will be restored by  
23 the end of December, and that the significant portion of the  
24 restoration will occur later on.

25 Mr. Rush. Mr. Alexander, can you give us some insight on

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 your opinions about the timeline, the estimated timeline? There  
2 might be some others on the panel that might also have some idea  
3 about the estimated timeline for Puerto Rico and, also, the U.S.  
4 Virgin Islands.

5 Mr. Alexander. Sir, as for Puerto Rico, we estimated 30  
6 percent of the pre-storm load on the grid would be restored by  
7 30 October. We did achieve that metric on time before the 30th.  
8 I believe we are up over 31-32 percent today. Our estimate is  
9 50 percent pre-storm load restored by 30 November. And then, as  
10 we go on into the new year, we are estimating 75 percent by 31  
11 January.

12 Mr. Rush. Anyone else want to add?

13 [No response.]

14 All right. Mr. Alexander, is the Corps currently involved  
15 in discussions with PREPA, or any other government entity in  
16 Puerto Rico, to ensure that when the grid is repaired, it will  
17 meet construction -- it will be a way to account some of the lessons  
18 learned from this ongoing catastrophe for the American taxpayers'  
19 dollars are not being wasted?

20 Mr. Alexander. Sir, we are focused on executing the mission  
21 we have been assigned, which is the restoration of the grid to  
22 pre-storm conditions, the load, and we are coordinating with PREPA  
23 as we do that. We actually, though, are working with the  
24 Department of Energy on what a more resilient grid might look like,  
25 as they lead the effort to develop recommendations and cost

**NEAL R. GROSS**

www.nealrgross.com

1 estimates. But, for now, we are executing our mission under the  
2 Stafford Act, which does not allow for any permanent construction  
3 or enhancement of the existing grid.

4 Mr. Rush. I yield back, Mr. Chairman.

5 Mr. Upton. The Chair will recognize the Vice Chair of the  
6 subcommittee, the gentleman from Houston, Texas, Mr. Olson.

7 Mr. Olson. I thank the Chair.

8 And welcome to all five witnesses. A special pony up to the  
9 new Chairwoman of the PUC of Texas, Ms. DeAnn Walker. My daughter  
10 Kate is a junior at SMU, your alma mater, and she loves it.

11 My first two questions are for you, Mr. Alexander, one about  
12 Harvey and one about Irma. First of all, Harvey. As you know,  
13 sir, I live in Fort Bend County, Texas. When Fort Bend floods,  
14 it floods. We have had four major floods in the past three years.  
15 Our drainage district works hard 24/7, 365, to make sure our  
16 drainage ditches are maintained. After the first major flood in  
17 2015, the Army Corps told our drainage district they need a Section  
18 404 permit under the Clean Water Act to maintain the ditches. The  
19 maintenance of a drainage ditch is supposed to be exempt from the  
20 permitting process under Section 404. But the Corps disputed the  
21 exemption and referred the district to the EPA. The EPA agreed  
22 it is maintenance work and the county should be good to go. But  
23 here we are, two years and four floods later, with Fort Bend County  
24 still unable to fix this critical problem. And now, Harvey has  
25 made a bad problem much, much worse.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           These repairs can't wait. Texas and Fort Bend need to  
2 rebuild after Hurricane Harvey. Things are being made worse with  
3 erosion and piles of silt. We don't need red tape at the Corps  
4 hindering the maintenance project that should be exempt under  
5 Section 404(f)(1)(C) of the Clean Water Act.

6           My question is, will you guarantee me that your office will  
7 work with my staff and local Fort Bend County officials, under  
8 Judge Bob Hebert, to get this fixed ASAP, so Texans can protect  
9 their livelihoods?

10          Mr. Alexander. Sir, thank you. I acknowledge your  
11 concerns. I am generally aware of this issue in Fort Bend. While  
12 I do not have all the specific details here with me today, I can  
13 assure you and can guarantee you that the Corps remains committed  
14 to working with our partners and your office to resolve this issue.

15          Mr. Olson. Great. ASAP, please.

16          The next question about Hurricane Irma that follows up on  
17 comments and questions from my colleague from Illinois, Mr. Rush.  
18 Sir, have you ever talked to someone on the ground in PREPA? Have  
19 you, yourself, talked to someone on the ground PREPA about the  
20 situation in Puerto Rico?

21          Mr. Alexander. No, sir, I have not.

22          Mr. Olson. Wow, have not. Okay.

23          The second round of questions is for you, Ms. Walker. First  
24 of all, I want to thank you for your service to our state. I  
25 appreciate your work in guiding us through Harvey. And I know

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Drew Vincentchild at the PUC. You have been our PUC Chair for  
2 41 rather intense days, I do believe. And as you know, for a city  
3 like Houston, I want you to talk about how Harvey as being a storm  
4 event with heavy rain as opposed to wind and storm surge, and how  
5 does that change the impacts you have to address? And what was  
6 the biggest surprise you had to recovery? Can we help with that  
7 surprise to mitigate that, either D.C. or NGOs? How can we  
8 address your concerns/surprises after Hurricane Harvey with our  
9 grid there in Fort Bend County, Texas?

10 Ms. Walker. Well, as you noted, wind damage is very  
11 different than flooding damage, and Houston did have the flooding  
12 damage during this hurricane. The biggest surprise was the  
13 amount of rain. There was substations such as Memorial  
14 substation that took on water that had never taken on water in  
15 the 50 years that it had been there. And so, we were having to  
16 come up during the storm with ways to address all of the flooding,  
17 moving crews. Frankly, they were using aquatic equipment that  
18 they had never used before to get to things because of the  
19 flooding.

20 Houston, also, downtown experienced heavy flooding. I  
21 believe I heard that 83 of the downtown buildings lost power, and  
22 I think some still are without power. Luckily the medical center  
23 did not. We have reinforced the medical center time and time  
24 again since Hurricane Allison. It wasn't a hurricane, but since  
25 Allison.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           And so, I am not sure of anything that you all can pass here  
2 that would help us. We continue to learn from each storm. Each  
3 storm is different. Hurricane Ike was a wind event. It took,  
4 out of 2.2 million, it took out 2 million. It was a much different  
5 storm.

6           Mr. Olson. Again, being a Member who lives in the area, I  
7 have to thank you so much because, when Harvey hit my house twice  
8 in two days, we never ever, ever lost power. So, thank you for  
9 that.

10          I yield back.

11          Ms. Walker. Thank you.

12          Mr. Upton. The Chair recognizes the ranking member of the  
13 full committee, Mr. Pallone.

14          Mr. Pallone. Thank you, Mr. Chairman.

15          Obviously, in addressing the panel, I have to say it, express  
16 my concern that the federal response so far is nowhere near where  
17 it needs to be. Reports indicate nearly 70 percent of Americans  
18 on the island are without electricity. The New York Times  
19 recently described the situation of Puerto Rico, quote, "like  
20 going back in time". Most of my questions are of Mr. Alexander  
21 and the Corps.

22          Mr. Alexander, who is in charge of the effort to restore power  
23 in Puerto Rico and the Virgin Islands? Is it the Army Corps or  
24 another agency?

25          Mr. Alexander. Sir, again, our mission, assignment from

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 FEMA, is to restore the grid to pre-storm condition in  
2 coordination/collaboration with PREPA.

3 Mr. Pallone. That is fine. I just wanted to get --  
4 Mr. Alexander. Okay.

5 Mr. Pallone. You answered my question.

6 Is there a strategic plan for these federal restoration  
7 efforts?

8 Mr. Alexander. Sir, if you look at strategic beyond the  
9 pre-storm restoration, that is being looked at by Energy and other  
10 departments and the interagency --

11 Mr. Pallone. So, the DOE is more responsible for a long-term  
12 plan, is that what you are saying?

13 Mr. Alexander. For full, permanent grid restoration  
14 enhancement, yes, sir.

15 Mr. Pallone. And you are more involved in trying to get  
16 things up and going?

17 Mr. Alexander. Sir, we are involved in trying to restore  
18 the grid in different sectors as expeditiously as possible with  
19 concentration initially on San Juan and, then, out to seven larger  
20 municipalities on the island, and then, finally, preparing and  
21 transitioning to PREPA for permanent service.

22 Mr. Pallone. All right. Now how many companies -- yes, I  
23 understand the Corps has several contracts with private companies  
24 for restoration work -- how many companies has the Corps  
25 contracted with to perform the grid-rebuilding work in Puerto

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Rico?

2 Mr. Alexander. Sir, we have contracted with three  
3 companies.

4 Mr. Pallone. And will the Army Corps provide the committee  
5 with copies of those contracts, so that we can get an understanding  
6 of their scope? Would you be willing to do that through the  
7 chairman?

8 Mr. Alexander. Sir, I will have to speak to our contracting  
9 authority and see what is permissible because it is  
10 acquisition-sensitive material.

11 Mr. Pallone. All right. If you can, we would appreciate  
12 it. I know I am acting through the chairman in asking you for  
13 it.

14 We have heard varying reports as to how long it will take  
15 to restore power to the citizens of Puerto Rico. By some  
16 accounts, it will be many more months until power is fully  
17 restored. So, Mr. Alexander, when did the Army Corps receive its  
18 mission to repair Puerto Rico's grid from FEMA?

19 Mr. Alexander. On 30 September.

20 Mr. Pallone. And Hurricane Maria made landfall in Puerto  
21 Rico on September 20th. Do you know why it took FEMA 10 days to  
22 give the Army Corps its mission?

23 Mr. Alexander. Sir, we were not involved in deliberation.  
24 We were executing our temporary emergency power at that time.

25 Mr. Pallone. All right. Just on that issue, does the Army

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Corps mission assignment provide -- well, I guess you did answer  
2 that. You basically said, if I understood, that the short-term  
3 repairs in San Juan and these other areas is under your  
4 jurisdiction, but the long-term and fully reconstruction of a more  
5 efficient and resilient grid, that would be more DOE, correct?

6 Mr. Alexander. Yes, sir.

7 Mr. Pallone. All right. So, then, let me turn to Ms.  
8 Hoffman, to the DOE witness. If the Army Corps is not responsible  
9 for making long-term improvements, is the DOE taking the lead on  
10 this effort?

11 Ms. Hoffman. So, the Department of Energy is looking at  
12 strategies for long-term improvements with respect to  
13 strengthening the grid. So, ideas such as energy storage,  
14 microgrids or minigrids, options for rerouting power, better  
15 situational awareness, all those activities are activities that  
16 we are looking at. But, once again, the actual financing and  
17 implementation is the responsibility of the utilities or the  
18 governance structure that will be decided for Puerto Rico.

19 Mr. Pallone. But you stated in your testimony that DOE is  
20 leveraging the National Labs to develop long-term solutions to  
21 improve resiliency. What is the status of that effort?

22 Ms. Hoffman. So, the National laboratories, we have been  
23 in active discussion with the Grid Modernization Lab Consortium  
24 in looking at areas such as planning activities, situational  
25 awareness, looking at analysis-type activities, as well as

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 hardening activities. What this is going to have to be done as  
2 is mirrored up with the existing rebuilding process and looking  
3 at how some of the innovative solutions can be married in and built  
4 upon the existing rebuilding. So, that is going to take time and  
5 it is going to have to run in close coordination. So, we have  
6 seven technical experts in Puerto Rico working with the Army Corps  
7 to understand the timing and the extent of where their activities  
8 are going and opportunities for the future.

9 Mr. Pallone. All right. Thank you so much.

10 Thank you, Mr. Chairman.

11 Mr. Upton. The Chair will recognize the gentleman from  
12 Illinois, Mr. Shimkus.

13 Mr. Shimkus. Thank you, Mr. Chairman.

14 I want to try to go to three different directions real quick.  
15 But, Mr. Alexander, I am a former military officer. Someone has  
16 to be in charge. So, I think it is very troubling that we have  
17 you all there trying to restore the grid and you are not in  
18 consultation with PREPA. The basic question is, if you are going  
19 to call and yell at someone to get the job done, does anyone know  
20 who we are going to call? Mr. Alexander?

21 Mr. Alexander. Sir, my job is really --

22 Mr. Shimkus. Yes, you have been very good at trying to  
23 answer this tactfully. But who do we call?

24 Mr. Alexander. FEMA.

25 Mr. Shimkus. We call FEMA?

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Mr. Alexander. FEMA.

2 Mr. Shimkus. Okay. Do we get our answer?

3 Mr. Alexander. It is the authority we are operating under.

4 And I will say this: from our Chief of Engineers to our South  
5 Atlantic Division commanding general, and to a number of colonels  
6 that are on the ground in Puerto Rico, they collaborate and meet  
7 with PREPA on a daily basis.

8 Mr. Shimkus. Okay. Thanks. So, I think we probably  
9 should have FEMA here. That is who we should have had, FEMA, as  
10 far of this committee hearing. So, maybe we will do that as a  
11 followup.

12 Because, obviously, we all know the history behind PREPA and  
13 the bankruptcy and their questionable practices and their ability  
14 even to provide power before the storm.

15 Does anyone know why it took -- and Puerto Rico is separate  
16 because it is an island; it is far away; it is hard. Other states  
17 usually have, with the utilities have mutual assistance  
18 agreements. And you will see folks flow. Does anyone know if  
19 PREPA had a mutual assistance agreement with any stateside  
20 utility? Does anyone know that?

21 Ms. Hoffman. It is my understanding that PREPA had not asked  
22 for mutual assistance agreements. Early on in the storm they just  
23 did ask for it.

24 Mr. Shimkus. Yes, I have been told it took five weeks, PREPA  
25 took five weeks to ask anybody for help.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Ms. Hoffman. Yes, a letter was submitted two days ago, I  
2 believe, for mutual assistance. But, generally, the industry is  
3 very forward-leaning in discussing with the utilities and  
4 activating mutual assistance --

5 Mr. Shimkus. Well, we see it all the time.

6 Ms. Hoffman. Yes.

7 Mr. Shimkus. I mean, the trucks are on the road, whether  
8 there is an ice storm, whether there is in my neck of the woods  
9 a tornado, whether it is hurricanes. I have members of my  
10 congregation who are utility workers, and they are gone. That  
11 is a disappointing statement.

12 I also wanted to put on the record, I think we wanted the  
13 Nuclear Regulatory Commission to submit a letter for this hearing  
14 because the hurricanes did come through some of our locations  
15 where we have nuclear power plants, and we think that would help  
16 build the record of the resiliency, baseload power, the importance  
17 of that. And I would ask that, if we finally get a letter from  
18 the NRC, Mr. Chairman, that we are allowed to submit that for the  
19 record.

20 [The information follows:]

21

22 \*\*\*\*\* COMMITTEE INSERT 7\*\*\*\*\*

1 Mr. Shimkus. And the last point, I really want to go to Mr.  
2 Rusco and maybe Mr. Corbin. The crude oil world has changed  
3 significantly since the establishment of the SPRO. I have been  
4 here a long time, 20 years, and I think one thing is for sure:  
5 we have always bought high and sold low. Is that a safe statement  
6 in the history of the SPRO, in the purchase of crude oil? Mr.  
7 Rusco, do you want to answer that?

8 Mr. Rusco. I think that, just by the nature of when it was  
9 established, you know, it was established after a crisis.  
10 Usually, when DOE has had authority to expand, it is --

11 Mr. Shimkus. Quickly.

12 Mr. Rusco. -- after a crisis. And so, it has been at  
13 higher prices.

14 Mr. Shimkus. So, we have a history of buying high and  
15 selling low?

16 Mr. Rusco. At least buying high.

17 Mr. Shimkus. And your testimony talked about refined  
18 products. In the world really now the need is for immediate  
19 refined product, not base crude oil. In the old days when we were  
20 worried about deploying forces to Europe and sea lanes being  
21 closed, and importation of crude oil, a SPRO made sense. Am I  
22 right, based upon your testimony today, that you are saying maybe  
23 regional systems -- well, actually, regional systems which DOE  
24 was supposed to analyze, and that there would be more focus on  
25 refined product?

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           Mr. Rusco. I think that it is fair to say that most other  
2 countries that have strategic reserves have chosen to do that,  
3 for the reasons that you state, yes.

4           Mr. Shimkus. Thank you. I hope my colleagues will follow  
5 up on some of those questions. I have run out of time. I yield  
6 back.

7           Mr. Upton. The Chair recognizes the gentleman from  
8 California, Mr. McNerney.

9           Mr. McNerney. Well, I thank the chairman, and I thank the  
10 witnesses this morning.

11           Mr. Alexander, you mentioned prevention as a part of the  
12 mission. Within the Stafford Act framework, can the electric  
13 structure of Puerto Rico be rebuilt to improve grid resilience  
14 and using sustainable technology?

15           Mr. Alexander. Sir, the Stafford Act allows us to restore  
16 the grid to pre-storm conditions, meeting U.S. Code, electrical  
17 code, in order to satisfy life, health, safety requirements.  
18 Some have interpreted that to mean we are making a more resilient  
19 or betterment on the system, but that is not the case.

20           Mr. McNerney. Okay. Ms. Hoffman, has there been a credible  
21 estimate of the cost difference between rebuilding a system that  
22 is resilient and just rebuilding the old system to look like it  
23 did before?

24           Ms. Hoffman. There has not been a complete cost estimate,  
25 taking into consideration the amount of work that has been done

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 and that is being planned to be accomplished from the Army Corps  
2 of Engineers. So, there has been discussion around different  
3 advanced solutions, but that needs to be baselined with the work  
4 and the building planout. So, that needs to be evaluated still.

5 Mr. McNerney. So, it could be that building a system that  
6 is resilient and sustainable wouldn't cost much more than just  
7 rebuilding the old system up to code?

8 Ms. Hoffman. I think the analysis has to be completed.

9 Mr. McNerney. Okay. Thank you.

10 The Office of Electricity has worked on a State Energy Risk  
11 Assessment Initiative that helps states understand the risks to  
12 their infrastructure. Did the Virgin Islands and Puerto Rico  
13 have a risk profile before the hurricanes?

14 Ms. Hoffman. I would have to go back and look into that.  
15 I am not sure whether they did do a risk profile with the state  
16 assessments.

17 Mr. McNerney. Thank you.

18 Mr. Stafford, is it true that the National Science Foundation  
19 facility at the radiotelescope has an infrastructure that  
20 supported FEMA operations subsequent to the hurricane?

21 Mr. Shimkus. You said "Stafford".

22 Mr. McNerney. Oh, Mr. Alexander? Excuse me. Thank you,  
23 my colleague from Illinois.

24 Go ahead.

25 Mr. Alexander. Sir, now that I know it was me you were

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 talking to, could I ask you, please, to repeat the question?

2 Mr. McNerney. Sure. Is it true that the National Science  
3 Foundation facility radiotelescope infrastructure survived well  
4 enough to serve as a FEMA operations center?

5 Mr. Alexander. Sir, I am not aware of that.

6 Mr. McNerney. Okay. I was going to ask you what  
7 differentiated that facility that survived from facilities that  
8 did not survive. Does anyone have a clue to that question?

9 Mr. Alexander. I do not.

10 Mr. McNerney. No?

11 Ms. Walker, you highlighted the inconsistencies in tracking  
12 outages in the system. Would better tracking of outages be  
13 beneficial? Or how would it be beneficial?

14 Ms. Walker. It helps us determine where to deploy services,  
15 such as, we call them pods, but water, food, whether or not outages  
16 are going to be restored quicker, and we know how many in the area  
17 have outages. We are able to, then, deploy the needs for that  
18 community better with that knowledge; also, working with the Corps  
19 of Engineers on deploying temporary generators. It just helps  
20 us to understand where to deploy for those needs.

21 Mr. McNerney. Do you have the authority to require  
22 utilities to report outages?

23 Ms. Walker. Yes, we do.

24 Mr. McNerney. Is that authority a state authority or is it  
25 a federal authority?

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Ms. Walker. It is a state.

2 Mr. McNerney. Thank you.

3 Ms. Hoffman, how does the DOE go about helping utilities  
4 prioritize which lines, substations, and so on, should be put  
5 online first?

6 Ms. Hoffman. So, thank you very much for the question.

7 The utilities have a restoration plan as they look at their  
8 outage management system. They look at prioritization for  
9 transmission lines to get the most customers on as soon as possible  
10 and, then, work down into the distribution system. But they first  
11 must do damage assessments and assess really the extent of the  
12 damage on the system, and accelerating that damage assessment  
13 really helps a utility outline the restoration process.

14 What the federal government does is look at where the  
15 critical infrastructure is and are there any special needs with  
16 respect to storing large loads or storing critical  
17 infrastructure, whether it be telecommunication facilities,  
18 hospitals. And so, that is an ongoing discussion. But it gets  
19 melded with a utility's restoration plan and the utility's  
20 commitment with respect to how they are doing the restoration.

21 Mr. McNerney. I yield.

22 Mr. Upton. The Chair recognizes the gentleman from Ohio,  
23 Mr. Latta, for 5 minutes.

24 Mr. Latta. Well, thanks very much, Mr. Chairman, and for  
25 calling this hearing today. And thanks to our witnesses for being

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 here.

2 Ms. Hoffman, if I could ask you my first question, you noted  
3 that one of the reasons for the rapid electrical recovery in  
4 Florida was the nearly \$3 billion in grid resiliency improvements  
5 since 2006. Could you elaborate as to what those improvements  
6 were, and will DOE be working with Florida going forward to  
7 identify additional hardening practices?

8 Ms. Hoffman. So, thank you, sir, for the question.

9 The investments by Florida really have stimulated from  
10 activities that looked at, first, situational awareness, so  
11 looking at advance meter and infrastructure to provide the  
12 situational awareness that we have been talking about. Because,  
13 once you have that awareness, you can do an outage management  
14 system. You can actually look at how you can advance and  
15 preposition crews for a restoration process. It also has allowed  
16 for advanced switching to be able to minimize the amount of  
17 customers without power; versus taking down a whole feeder system,  
18 you can really isolate damage on a system and look at restoration  
19 opportunities.

20 Other things that the utilities have done is hardening their  
21 infrastructure by looking at stronger poles, looking at concrete  
22 poles, steel poles, versus your traditional wooden poles. But  
23 all these capabilities are pulled together with an advanced kind  
24 of communications and control system, but a situational awareness  
25 system that can help with the restoration process.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 Mr. Latta. Okay. You are talking about the different types  
2 of poles. Are there other things that they were doing on  
3 hardening, did you say?

4 Ms. Hoffman. So, with respect to substations -- and this  
5 would probably go more for Sandy, but also looking at hardening  
6 substations and being able to --

7 Mr. Latta. And how do they go about hardening the  
8 substations?

9 Ms. Hoffman. Pardon?

10 Mr. Latta. How do they go about hardening the substations?

11 Ms. Hoffman. So, when hardening the substations, you really  
12 look at increased capabilities with respect to duration, being  
13 able to support prevention of damage from wind, but also from  
14 flooding. So, it goes back to supporting infrastructure, so that  
15 you don't see the flooding damage that can occur.

16 Mr. Latta. Okay. Thank you.

17 Ms. Walker, if I could turn to you, can you elaborate on  
18 working with the federal agencies after Hurricane Harvey? And  
19 could you see any improvements that need to be made between  
20 federal, state, local, industry, all working together out there?  
21 Or what is your view as to what happened, and is there anything  
22 that can be improved on?

23 Ms. Walker. I think there are improvements that we can make.  
24 My view is that the time to make those is before the next storm.  
25 I found myself in the State Operations Center addressing issues

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1 that I think are better to try to handle after the storm and get  
2 ready for the next one. Some have to do with the interconnection  
3 for the FEMA temporary housing. Some had to do --

4 Mr. Latta. Could you elaborate on that, on the temporary  
5 housing, because I know I've seen different press reports on that,  
6 but would you elaborate on the temporary housing of FEMA?

7 Ms. Walker. Once they bring in temporary housing, it is not  
8 set, usually, right at the meter that the house is on. So, the  
9 utilities have to set a new pole. There are processes in Texas  
10 for each utility, and my guess is throughout the country for each  
11 utility, on how those processes are to interconnect the new  
12 customer, a new facility.

13 And we would like to streamline that for all utilities in  
14 Texas. We had five major utilities impacted by Harvey and, then,  
15 multiple coops and municipalities. And so, we are hoping to have  
16 one process for FEMA to have to go through, instead of multiple  
17 different processes. So, that is an example.

18 Mr. Latta. Okay. Any other examples you can think of that  
19 would be how to improve things out there?

20 Ms. Walker. We understood, or I understood, during  
21 Hurricane Harvey that there were issues, chokepoints, as they were  
22 called during Hurricane Ike, related to the processes, inspection  
23 processes, for cities to get homes reconnected once they are  
24 rebuilt, once they are remodeled. And so, I think that is  
25 something we can address going forward, how those inspections are

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 done, who does them, to make sure we have enough people on the  
2 ground.

3 It was during recovery. It is not, to me, the time to try  
4 to be addressing things like that. And I just think that that  
5 is something we can look at going forward.

6 Mr. Latta. Okay. Well, thank you very much, Mr. Chairman.  
7 My time is just about expired, and I yield back.

8 Mr. Olson. [presiding.] The gentleman yields back.

9 The Chair now calls upon the gentleman from Pennsylvania,  
10 Mr. Doyle, for 5 minutes.

11 Mr. Doyle. Thank you, Mr. Chairman.

12 Ms. Hoffman, welcome back to our committee. It is always  
13 nice to have another Penn-Stater here at the committee.

14 Let me ask you, in your testimony you explained DOE's role  
15 in restoration and recovery efforts in those areas affected by  
16 recent hurricanes. A DOE piece from 2015 published in Power &  
17 Energy Magazine that is still on your energy.gov site explained  
18 that, and I quote, "Both the frequency and intensity of these  
19 disaster events have been trending higher in recent years, with  
20 7 of the 10 costliest storms in U.S. history occurring in the last  
21 10 years. These weather disaster events represent one of the most  
22 significant threats posed by climate change." Now that was  
23 published in 2015. And since that time, we have witnessed the  
24 most extreme month of hurricanes that has ever been recorded  
25 earlier this year.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           So, I want to ask you, how is the Department of Energy  
2 responding to this increasing threat of climate change and extreme  
3 weather events?

4           Ms. Hoffman. So, the Department of Energy is looking at all  
5 hazards, including extreme weather, as we look at investment  
6 opportunities or research opportunities for advancing our  
7 electric grid. And so, a lot of our research focuses on advanced  
8 technologies, energy storage capabilities, advanced minigrids or  
9 microgrids, as they are called. We are looking at advanced  
10 capabilities that the utility industry can build and invest in  
11 for hardening and improving the infrastructure.

12           Mr. Doyle. Yes, I mean, exactly. In fact, that article  
13 goes on to detail the SmartGrid R&D Program which is designed to  
14 improve grid resilience and, also, modernizing the grid through  
15 the adaptation and integration of advanced technologies.

16           So, in your testimony you explain your recommendation for  
17 the rebuild as being formed in consultation with the National  
18 Labs. And a presentation from my NREL earlier this year explained  
19 the importance of distributed generation, calling it "a large  
20 factor in developing resiliency with clean energy technologies  
21 and solutions".

22           So, my question is, is the Department, in making  
23 recommendations to those that are helping rebuild the grid in  
24 Puerto Rico, which will essentially be a brand-new system, are  
25 you urging deployment of distributed systems and renewables?

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Ms. Hoffman. So, distributed generation, combined heat and  
2 power, which is probably the most efficient form of distributed  
3 generation, is an option that should be considered in any sort  
4 of restoration improvement process. But one of the things that  
5 we are going to have to think about moving forward is how are we  
6 going to repair systems if another emergency happens. As you look  
7 at Puerto Rico, which had, I believe, over 8,000 solar panels  
8 there, what is the process in which the Department of Energy and  
9 the restoration activities in the next event, how are we going  
10 to orchestrate the repair of those systems?

11 As you look at an efficient restoration process, there is  
12 an advantage to restoring the core electric grid. So, microgrids  
13 might a good balance between the two of looking at siting  
14 generation closer to load, but I think it has to be an individual  
15 evaluation with respect to the state of the system and the  
16 opportunities from that point of view.

17 Mr. Doyle. Thank you.

18 Let me just ask anybody on the panel, does anyone have a  
19 comment regarding FEMA's resistance to authorizing  
20 reconstruction aid? My understanding is this makes local  
21 governments and local utilities ineligible for long-term grants.  
22 And I am also concerned, because Puerto Rico is only eligible for  
23 emergency services, that these contracts don't end up following  
24 federal procurement rules and we end up with situations like  
25 Whitefish Energy. Has any of your agencies weighed in on this

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 topic? Is there an expected timeline for action on this?

2 Anyone?

3 [No response.]

4 I mean, FEMA authorized in 10 days in Houston, in Texas, and  
5 I believe in a couple of weeks in the Virgin Islands. But, yet,  
6 still, for some reason, this hasn't been fully authorized. They  
7 claim they are working on it; they are close to it. Could anyone  
8 explain what this holdup is and why it has taken so long?

9 [No response.]

10 I think you are right when someone said we should have had  
11 FEMA up here. FEMA should be sitting on this panel, too, because  
12 it seems like a lot of the questions we have need to be answered  
13 by them.

14 Well, let me ask it. Do any panelists have suggestions for  
15 any highly beneficial action we could take to help expedite the  
16 rebuilding efforts in a prudent, sustainable manner? Can you  
17 give any suggestions to this committee on what we should be doing  
18 that we are not doing right now?

19 Ms. Hoffman. Sir, if I may add some comments?

20 Mr. Doyle. I am glad to see Penn State stepping up to the  
21 plate here and at least answering a question.

22 [Laughter.]

23 Ms. Hoffman. As we look forward to investing in resilience,  
24 I know it is something that the Administrator of FEMA is looking  
25 at, as well as the Department. It is, how do we build in

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 resilience and how do we think about that upfront investment ahead  
2 of a disaster, and looking at what funds are available, to really  
3 think about investing for resilience?

4 Mr. Doyle. The idea that our citizens are going to go  
5 another three months without electricity is just unconscionable,  
6 I think.

7 I yield back.

8 Mr. Olson. The gentleman yields back.

9 The Chair now calls upon the gentleman from Ohio, Mr.  
10 Johnson, for 5 minutes.

11 Mr. Johnson. Thank you, Mr. Chairman.

12 I appreciate the opportunity to ask of this panel. A very,  
13 very important hearing that we are having today because we saw  
14 the effects of the hurricanes and how the destruction that  
15 occurred during and afterwards, how that affected not only the  
16 areas that were hit, but other regions of the country as well,  
17 since so much of our energy resources reside there on the Gulf  
18 Coast.

19 So, Mr. Corbin, how much does the Northeast Gasoline Supply  
20 Reserve cost on an annual basis? Let's get that question out of  
21 the way first.

22 Mr. Corbin. Thank you for the question, Mr. Johnson.

23 For the Northeast Gasoline Supply Reserve, the average  
24 storage contracts, which are for leased commercial storage for  
25 the product, are approximately \$19.60 per barrel per year. And

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 when you include overhead costs, to include quality assurance and  
2 administration of your IT/sales platform, in the event you have  
3 to release the gasoline, it comes to a little over \$20 per barrel  
4 per year, sir.

5 Mr. Johnson. Okay. So, is the higher per-barrel cost of  
6 storing gasoline versus crude oil a good use of taxpayer dollars,  
7 do you think?

8 Mr. Corbin. That is really not for me to decide, whether  
9 that is a good use of the taxpayer dollars.

10 Mr. Johnson. But you have got an opinion?

11 Mr. Corbin. I will say, Mr. Johnson, that in terms of the  
12 cost of storage for refined products, the United States has, out  
13 of 14 countries that participated in benchmarking studies that  
14 are stock-holding countries, the U.S. has by far the highest cost  
15 for gasoline storage out of the 14 countries.

16 Mr. Johnson. Okay. All right.

17 Also, Mr. Corbin, continuing on, the SPR is almost entirely  
18 located in the Gulf Coast region of the United States, limiting  
19 its ability to respond to disruptions in other parts of the  
20 country, particularly if we were to have a repeat of what we saw  
21 recently. For example, the West Coast has relatively few  
22 pipelines that are connected to the SPR, meaning that some  
23 petroleum products must be shipped by truck, barge, or other  
24 domestic methods or by tankers even from foreign countries.  
25 These modes of transport, obviously, are slower and more costly

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 and limit the usefulness of the Strategic Petroleum Reserve. So,  
2 how would expanding, in your opinion, how would expanding the  
3 number of SPR locations across the country enhance the  
4 effectiveness of the SPR?

5 Mr. Corbin. First, I would just like to make a correction  
6 to your statement, sir. There are no pipelines that directly  
7 connect the SPR to the West Coast of the United States.

8 The SPR, as I mentioned in my testimony, our crude oil is  
9 stored in underground salt caverns in two sites in Texas, two in  
10 Louisiana. Salt cavern storage is very inexpensive. We have the  
11 lowest operating cost of any stock-holding country in the world  
12 for our crude oil. There are no salt domes along the West Coast  
13 of the United States. There are some outside of the immediate  
14 Gulf Coast area, but they are not significant. So, crude oil  
15 storage would be problematic on the West Coast.

16 Mr. Johnson. So, you are basically saying -- I don't mean  
17 just the West Coast; I mean other regions of the country as well.  
18 I mean, the question centered on the West Coast. So, you are  
19 saying, in your opinion, developing other storage areas for the  
20 SPR around the country in different regions would be problematic?

21 Mr. Corbin. For crude oil storage. Now, in discussions  
22 that were mentioned by Mr. Shimkus earlier, and talked about  
23 refined product storage, the U.S. Government currently has two  
24 refined products reserves, the Northeast Gasoline Supply Reserve  
25 and the Northeast Home Heating Oil Reserve. They are both very

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 small, 1 million barrels apiece. They are intended to meet  
2 regional supply disruptions.

3 There are challenges associated with product reserves,  
4 regardless of the model that is used. Both of the product  
5 reserves that are currently in existence, they are, essentially,  
6 government-owned refined product in leased commercial storage  
7 facilities. In any product reserve with that model, there is an  
8 initial refined product acquisition cost associated with it. In  
9 studies that we did in PADD 5, which is the West Coast, and in  
10 the Southeast U.S., my staff found that there is little to no spare  
11 commercial storage capacity. And as I mentioned previously, the  
12 leased commercial storage costs are high.

13 Mr. Johnson. Okay. All right.

14 Mr. Chairman, I yield back.

15 Mr. Olson. The gentleman yields back.

16 The Chair now calls upon the gentlelady from Florida, Ms.  
17 Castor, for 5 minutes.

18 Ms. Castor. Thank you, Mr. Chairman. And I want to thank  
19 Chairman Upton and Ranking Member Rush, and the professional  
20 staff, for bringing this hearing to be. And thanks to all of our  
21 witnesses.

22 There is a very serious tension that the Congress has to  
23 address as soon as possible. On the one hand, we need to restore  
24 power in Puerto Rico and the U.S. Virgin Islands as quickly as  
25 possible, but, on the other hand, Congress has an overarching

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 responsibility to protect the taxpayer from future losses by  
2 building a more resilient, modern, distributed grid with better  
3 technology, technology, by the way, that has largely been funded  
4 by the taxpayers that we see in our National Laboratories that  
5 is used by utilities and businesses all across the country.

6 Senator Ramon Luis Nieves, who is in the audience and is going  
7 to testify on the next panel, is a former Chairman of the Puerto  
8 Rican Senate Committee on Energy. He says the current grid is  
9 obsolete, the grid before the storm, before the hurricanes. He  
10 said in his testimony, "Appropriating taxpayer money just to  
11 repair an old 20th century grid would be a waste of resources."  
12 In fact, Ken Buell, the Director of Emergency Response and  
13 Recovery with the U.S. Department of Energy, stated that, "We  
14 really should think in terms of rebuilding at this point, not just  
15 repairing the old grid."

16 The problem that we have all got to grapple with is PREPA  
17 is largely in debt. They do not have the wherewithal now to take  
18 the lead on this. They have governance problems. Gosh, what  
19 else do we have to know after this Whitefish contract controversy?  
20 I think we have a very significant responsibility to protect the  
21 taxpayers here.

22 A few weeks ago, there was a congressional briefing provided  
23 by the Department of Homeland Security, FEMA, and the U.S. Army  
24 Corps of Engineers was there. They also relayed that they only  
25 have the authority now to go in and make repairs, and not do the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 kind of rebuilding of a modern grid that needs to happen.

2 In fact, Mr. Alexander, in your testimony you say that your  
3 mission right now is to repair the power system to its pre-storm  
4 condition, is that correct?

5 Mr. Alexander. Yes, ma'am.

6 Ms. Castor. Ms. Hoffman, what kind of direction do you need  
7 from the Congress to begin to go beyond a planning stage and do  
8 something that your very own Director of Emergency Response and  
9 Recovery has said needs to be done? And do you agree that you  
10 need that authority to go beyond repairing?

11 Ms. Hoffman. So, I think there has to be an ability for the  
12 Department of Energy to work closely with PREPA in planning and  
13 actively engaging and discussing what some of those advanced  
14 technologies solutions are. So, the forum has to be codified,  
15 so that there can be active engagement and discussion of what are  
16 the opportunities. I know that PREPA has their own plans and  
17 their own activities, but how do we really take the advancements  
18 and provide that?

19 Ms. Castor. So, you think, yes, it would be helpful for  
20 Congress to provide additional clarity, so that you can move  
21 forward to do what, on a bipartisan basis, what experts have  
22 advised that needs to be done in Puerto Rico?

23 Ms. Hoffman. Yes.

24 Ms. Castor. And the Virgin Islands? Okay.

25 Ms. Hoffman. Yes.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Ms. Castor. We have got to do this with a sense of urgency,  
2 though. Mr. Alexander, how do we do this? As you keep going on  
3 to repair, what kind of advice, what kind of clarity do you need  
4 from the Congress in maybe the next emergency aid package, maybe  
5 in something that would allow you to go beyond just repairing the  
6 old, obsolete grid and moving forward on something that would  
7 protect the taxpayers?

8 Mr. Alexander. So, while we recognize that the pre-storm  
9 grid was not in good condition, the current authorities under the  
10 Stafford Act, and the mission assigned for FEMA, limits us to  
11 restoring to pre-storm condition, meaning U.S. Code. I think  
12 this is, ultimately, a policy decision. Do we need to relook at  
13 the Stafford Act? As written, it was --

14 Ms. Castor. And Colleagues, let me -- thank you very much  
15 -- in previous emergency aid packages for Superstorm Sandy and  
16 for Katrina, it has been the Congress that has been able to go  
17 beyond the Stafford Act that limits the government to just going  
18 and repairing what was, and building in, instead, a new  
19 resiliency, whether it is in housing or defense installations and  
20 things like that, those previous emergency aid package. We have  
21 never had a blackout and destruction of an electric grid the scale  
22 of this ever before in the country, and that is why this is  
23 something new this committee needs to work on together with our  
24 colleagues in the Senate and, hopefully, with DOE, as they have  
25 expressed they are already doing some of this planning. But, to

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 put this into action, it is going to be our responsibility to  
2 actually pass that authorization in the next emergency aid package  
3 or before.

4 And I yield back my time.

5 Mr. Olson. My friend's time has expired.

6 The Chair now calls upon the gentleman from the Commonwealth  
7 of Virginia, Mr. Griffith, for 5 minutes.

8 Mr. Griffith. Thank you very much, Mr. Chairman. I  
9 appreciate it,

10 Ms. Hoffman, during a hearing before this committee,  
11 Secretary Perry mentioned that microgrids could be a solution to  
12 quickly restore electricity after future natural disasters. I  
13 am also interested in how microgrid technology could be used to  
14 provide power to rural and rural mountainous areas of the country.  
15 Do you believe Puerto Rico could benefit from microgrids and, if  
16 so, how?

17 Ms. Hoffman. So, thank you very much for the question.

18 Microgrids provide an opportunity to bring generation closer  
19 to the load and be able to manage supply and demand on a more local  
20 basis. In Puerto Rico you have the generation on one side of the  
21 island and, of course, the load on the other side of the island.  
22 So, ultimately, you really would like to be able to create a  
23 minigrid or a microgrid. It would be able to balance that in a  
24 different form. But that does require generation, and it does  
25 require load management and advanced communications and controls

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 to be able to manage that on a more localized basis. So, you look  
2 at things such as energy storage and other generation that can  
3 be meshed very well with a local distribution system.

4 Mr. Griffith. Now would you see that as exclusive of the  
5 current type of system or would you see it as an ancillary except  
6 in times of disaster?

7 Ms. Hoffman. So, ideally, I would love to think about how  
8 you build off of the existing system and capitalize on the existing  
9 investment, where it is electrically feasible. And then, once  
10 again, that requires close coordination with the existing  
11 infrastructure. Whenever utilities look at isolation or  
12 separation of the grid and look at microgrids, they are looking  
13 at utilizing the existing assets and being able to build upon those  
14 assets with new technology and new capabilities.

15 Mr. Griffith. And if you are suddenly cut off, as we have  
16 seen in Puerto Rico, from your supply of either electricity or  
17 the fuel to produce that electricity, doesn't that require that  
18 the microgrid also have some kind of a fuel source that it can  
19 tap into in cases of emergency?

20 Ms. Hoffman. Absolutely. You need a fuel source. You  
21 need redundancy. You need to be able to ensure reliability of  
22 the microgrid. Whether it is a utility-owned or a  
23 private-sector-owned, you have to have that redundancy and  
24 capability for your customers.

25 Mr. Griffith. I appreciate that.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           What are the current limitations associated with the  
2 microgrid technology, if any?

3           Ms. Hoffman. So, some of the current limitations are really  
4 looking at microgrid controllers to be able to have an ability  
5 from a standards form to be able to look at control of the  
6 microgrid, looking at cybersecurity. Regardless of who owns the  
7 electric grid and how the electric grid is developed, you have  
8 to be secure. You also have to have the capability to dynamically  
9 manage supply and demand. So, looking at some of the advanced  
10 control solutions and things along those lines, as well as the  
11 generation technology.

12           Mr. Griffith. Now let me ask you this: can you envision  
13 that a microgrid might be as small as, say, just a power source  
14 that would handle a hospital and its needs or a factor and its  
15 needs for short periods of time, as a part of the system as a whole,  
16 but, then, also, in times of emergency be able to take care of  
17 those needs where we have seen problems in Puerto Rico and other  
18 places?

19           Ms. Hoffman. So, absolutely. We have seen microgrids at  
20 university campuses, at hospitals. So, it can be as small as one  
21 wants to define a microgrid, but also can be larger from a minigrid  
22 point of view, if you want to support multiple services in a  
23 locality.

24           Mr. Griffith. And I would assume that, based on what we have  
25 already discussed, that if you had, if for some reason in the

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 natural disaster your fuel source was damaged, but the rest of  
2 the equipment was still good, that it would be easier to drop in  
3 the fuel, for the federal government to come in after the disaster  
4 and drop in the fuel than it would if you drop in a whole new system,  
5 isn't that correct?

6 Ms. Hoffman. I think that has to be evaluated on a system  
7 basis, to be fair.

8 Mr. Griffith. Okay.

9 Ms. Hoffman. I mean, you are bringing in a lot of fuel, and  
10 it kind of comes down to what really is it required for a  
11 cost-effective restoration. What we are talking about is getting  
12 the power back on for as many customers as possible as efficiently  
13 and as effectively as possible. And so, in some cases that may  
14 be putting in, re-establishing a grid system and a grid network.  
15 In other cases in a localized community that is very far and  
16 isolated, it may be putting onsite generation there and creating  
17 a minigrid in the near term until lines and power can be restored  
18 from a main grid point of view.

19 Mr. Griffith. And I appreciate that. Of course, in my neck  
20 of the woods where we have a lot of coal and some natural gas,  
21 but a lot of coal, we think that might be an answer for us, and  
22 maybe for others, to have that fuel source available and have the  
23 big microgrid ready to go.

24 With that, Mr. Chairman, I appreciate it very much and yield  
25 back.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Mr. Olson. The gentleman yields back.

2 The Chair now calls upon the gentleman from Iowa, Mr.  
3 Loeb sack, for 5 minutes.

4 Mr. Loeb sack. Thank you, Mr. Chair.

5 Thanks to the panel today for your excellent testimony, and  
6 we have had a lot of great questions.

7 I guess I want to join in with everyone else in expressing  
8 the fact that I was heartbroken by the devastation of these most  
9 recent storms. I think it is unfortunate that we are probably  
10 going to see a lot more of this down the road. So, we are going  
11 to be faced with these issues, I think, across the country.

12 And many of us represent districts that have already been  
13 affected over the years by this kind of devastation. I  
14 represented Cedar Rapids, Iowa, for six years. Back in 2008, we  
15 had the Flood of the Century or the flood of whatever number of  
16 centuries, and the river crested at 31 feet, 9 feet over the  
17 previous record. There was \$2.5 billion damage done immediately  
18 in Cedar Rapids, the economic loss of probably the same. And they  
19 have been through a lot, like a lot of communities around this  
20 country, and just most recently what we have seen in Puerto Rico  
21 and Texas and Florida.

22 I do want to, I guess, address my concerns more to Mr.  
23 Alexander than anybody with respect to the Corps. You know, the  
24 Corps I know ranks the projects, and we are going to have a lot  
25 of projects coming up, what we have seen recently, projects for

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 reconstruction, for flood mitigation. I run the benefit/cost  
2 ratio, and it has to be at least 1-to-1, as you know.

3 Cedar Rapids was 1.2-to-1. We authorized the project to go  
4 forward in 2014, but we haven't seen any movement on it in terms  
5 of funding. And this is going to happen in these other instances,  
6 too. We are going to have a lot of challenges, sort of where to  
7 prioritize, where to put the money.

8 But I have a lot of concerns with this benefit/cost ratio.  
9 It seems awfully bureaucratic to the folks who are living in these  
10 communities when they want to prevent floods in the future. Can  
11 you address that issue and give us any hope at all that, not just  
12 Cedar Rapids, Iowa, but these communities that are going to be  
13 faced with flood mitigation down the road might get some relief  
14 and actually see some projects built?

15 Mr. Alexander. Sir, I am familiar with benefit/cost ratios  
16 and prioritizing and racking and stacking of projects, and the  
17 needs are many, but the budget is limited. But my focus is on  
18 contingency operations. And so, to adequately address your  
19 question, I would have to refer to our Civil Works personnel. So,  
20 I could have my staff coordinate with them.

21 Mr. Loeb sack. Yes, I suspected that might be the case, but  
22 I am going to go ahead and submit a question on the last. Then,  
23 if you can get us an answer from the relevant person at the Corps,  
24 that would be great. Again, I just want to bring up this issue  
25 more than anything else, because going forward this is going to

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 cost, as we know, billions of dollars for reconstruction in these  
2 communities. And a lot of them are going to face the same  
3 questions that Cedar Rapids faced since 2008, and a lot of other  
4 communities around the country, and it is something that we are  
5 going to have to pay close attention to and we are going to have  
6 to resolve that issue, because folks are going to be depending  
7 upon those reconstruction funds to make sure that they can go  
8 forward with their communities.

9 So, thanks to all of you.

10 And thank you, Mr. Chairman. With that, I will yield back.

11 Mr. Olson. The gentleman yields back.

12 The Chair now calls upon the patient gentleman from West  
13 Virginia, Mr. McKinley, for 5 minutes.

14 Mr. McKinley. Very patient, very patient. Thank you, Mr.  
15 Chairman.

16 Mr. Olson. Very patient.

17 Mr. McKinley. Mr. Chairman, given the aftermath and all the  
18 discussion here we have had about the natural disasters we have  
19 had in Florida, Texas, Louisiana, Puerto Rico, I really want to  
20 applaud the Department of Energy's efforts to refocus the  
21 narrative and the discussion about reliability and resiliency,  
22 because really it underscored how serious that problem is if we  
23 don't address it. So, thank you for what you are doing, and for  
24 Secretary Perry, for focusing on that, because I think that could  
25 have some impact.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 But my question, a little along the same line, has to do with  
2 the petrochemical industry in the Houston and Louisiana, all of  
3 the Gulf Coast, where we were so hard hit when that Category 4  
4 hit there that it wiped out or shut down 17 -- I think there are  
5 23 crackers down in that area -- 17 of them were shut down. One  
6 of them is still out. Sixty percent of our production of  
7 polyethylene and propylene were lost for a period of time. It  
8 showed how vulnerable we are in that area.

9 And I know that, in contact with folks that have reached our  
10 office, because of that slowdown, because of the lack of cracker  
11 facilities to be able to provide the ethylene and propylene around  
12 the country, companies all across America that use their plastic  
13 resins are slowing down as a result. One company, particularly,  
14 in my district was working seven days a week. It is now down to  
15 five because it can't get the plastics.

16 So, this thing is serious about it. What we have done, or  
17 what I think DOE maybe has an interest -- and I would like to hear  
18 more from you -- is that, rather than taking a page from the  
19 Strategic Petroleum Reserve of having it all in one location, what  
20 if we were to locate an ethane storage up in the northern  
21 Appalachian area, right where the Marcellus and the Utica shale  
22 formations are located, so that we could have a secondary supply,  
23 a secondary source, to be able to provide that, the petrochemical  
24 supplies of material for around the country?

25 Do you have a thought about that from DOE's position, here

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 they may be on having a secondary? It is not replacing Houston  
2 by any stretch. It is just having something that is in another  
3 location, so it is not vulnerable to the weather.

4 Ms. Hoffman. So, Congressman, you bring up an important  
5 issue. It is location, location, location. Diversity is very  
6 important. And as we look at any sort of, whether it is fuel  
7 product, chemical product, having and thinking about having  
8 flexibility in where that product is developed also looks at our  
9 security and resilience for the nation. So, I understand that  
10 in the Appalachian area there is a lot of natural gas resources  
11 and a byproduct of natural gas and the ability is ethane. And  
12 so, I know that the Secretary had a roundtable discussion and is  
13 looking at the opportunity. But it brings up the important point  
14 that we need to think about diversity and I wanted to say  
15 "generation diversity," but product diversity in the United  
16 States.

17 Mr. McKinley. Following up on that is that, during last  
18 year's appropriation process, our office had introduced an  
19 amendment to the appropriation bill to see that a study was  
20 undertaken to confirm whether or not there was an interest or  
21 possibility and potential for having it in the Marcellus and the  
22 Utica shale formations. That has been since, I think it was May.  
23 Do you have a sense? Can you give me a status on how far along,  
24 if it has been undertaken yet, to make a determination of the  
25 feasibility of locating a secondary ethane storage?

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Ms. Hoffman. So, I understand the Department is undertaking  
2 a study in this area, and it is my understanding that this study  
3 will be completed in 2018.

4 Mr. McKinley. Do you have an idea when in 2018? In December  
5 or is that going to be in September or October?

6 Ms. Hoffman. I don't have that.

7 Mr. McKinley. Okay.

8 Ms. Hoffman. I will get back to you on that answer.

9 Mr. McKinley. If you could back to me, I would appreciate  
10 it. And I yield back. Thank you.

11 Mr. Olson. The gentleman yields back.

12 The Chair now calls upon the gentleman from the Bay state,  
13 the Bayline state -- I'm sorry -- the goldmine state, Mr. Sarbanes,  
14 for 5 minutes. I apologize.

15 Mr. Sarbanes. All those names work.

16 Thanks to the panel.

17 I wanted to ask you, Mr. Alexander, to step back in terms  
18 of the Corps' relationship to these disasters that have been  
19 occurring with more frequency, and give me a sense of how much  
20 the Corps' mission and effort and sort of the deployment of its  
21 various projects has changed over the last few years in either  
22 response to the disasters that we are seeing, these natural  
23 disasters, or in anticipation that the frequency of them is going  
24 to increase. Is that an analysis that is happening? Can you cite  
25 some trends in terms of the Corps' projects around this, the kind

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 of requests that come in that are related to resiliency and  
2 adaptation, and so forth, in addition to just efforts to respond  
3 to things that happen? So, if you could give that kind of  
4 30,000-foot perspective, that would be helpful.

5 Mr. Alexander. Thank you, sir.

6 First, every year following a storm season, we do an  
7 after-action review and we identify lessons learned, and we work  
8 to develop and establish best practices, so that we can improve  
9 ourselves, train accordingly. How can we work with state and  
10 local governments to help them prevent and work toward mitigation  
11 of a disaster?

12 We are always looking at how we can improve our critical  
13 infrastructure. We have an aging infrastructure, as you know.  
14 So, that is a separate issue. We acknowledge that infrastructure  
15 needs to be resilient in order to withstand storms such as this,  
16 flooding on the Mississippi, tornadoes out in the Midwest. We  
17 are looking, as we move forward and develop and study projects  
18 and future projects, we are looking at ways to ensure that a  
19 greater degree of resilience is incorporated in those designs.

20 Mr. Sarbanes. Are you seeing an increase? Is there a  
21 marked increase or at least something measurable in the kinds of  
22 proposals that are coming into the Corps that relate to these  
23 extreme weather events, either responding to something that has  
24 happened or projects that are anticipating increased exposure  
25 from these events? And has the Corps' kind of scoring system for

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 projects been adjusted in any way relative to what has been  
2 happening with these kinds of disasters and weather events?

3 Mr. Alexander. I am not in a position to adequately address  
4 your question. I can say, I mean, we do every year; we have  
5 requests for additional flood damage mitigation projects. How  
6 can we increase the resilience in levy systems and support and  
7 mitigate flooding in low-lying areas, flood plains, things of that  
8 nature?

9 Mr. Sarbanes. I would appreciate it, if it were possible,  
10 to go back to the Corps, and maybe after the analysis following  
11 this hurricane season has been completed, to see if you could give  
12 us some information about trends over the last few years in terms  
13 of the number of projects that fall into that kind of a basket  
14 and, as I said, whether the Corps is putting that analysis and  
15 thinking into a strategic plan for the Corps going forward that  
16 may lead to creating different sets of priorities for project  
17 based on some of these issues. So, if that is something,  
18 certainly getting that analysis -- I assume we can get some report  
19 on the analysis that is done on an annual basis -- that would be  
20 helpful, but, then, any additional perspective you can bring on  
21 those kinds of trends would be helpful.

22 Mr. Alexander. Yes, sir, we will.

23 Mr. Sarbanes. Thanks. I yield back.

24 Mr. Olson. The gentleman yields back.

25 The Chair now calls upon the gentleman from Missouri, Mr.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Long, for 5 minutes. Welcome back, Billy.

2 Mr. Long. Thank you, Mr. Chairman.

3 And, Ms. Hoffman, 10 or so years ago, my hometown of  
4 Springfield, Missouri, we received a devastating ice storm where  
5 there were folks out of power for 10, 12 days, two weeks, whatever,  
6 and the utility companies came in from all over to help us in that  
7 situation. I know the recent situation in Florida, from the  
8 Washington, D.C., area here in Maryland, Virginia, and  
9 Springfield, Missouri, again sent crews down to Florida to help  
10 in that situation. So, I know what it is like whenever people  
11 -- neighbors helping neighbors, so to speak.

12 You note in your testimony that mutual assistance provided  
13 by electric companies, public utilities, and electric  
14 cooperatives across the country played an important role in  
15 restoring power so quickly in Florida. Could you discuss the  
16 logistics of bringing in as many as 60,000 workers from across  
17 the country to quickly assess and restore, or assess restoration  
18 locations, and how this effort is being coordinated by industry?

19 Ms. Hoffman. So, thank you very much for the question. And  
20 I think it is an impressive network, and the aggressive posture  
21 that the utility industry has had, as well as the lessons learned  
22 from Katrina and past events, that the utilities have really taken  
23 it upon themselves to have a leadership position in developing  
24 a mutual assistance network. This is a network where utilities  
25 talk among each other, request mutual assistance, and it is

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 organized to provide mutual assistance to utilities that request  
2 it. And this is across the United States. There is different  
3 coordination and different entities that are responsible for a  
4 mutual assistance request in different areas of the country.

5 The utilities that provide mutual assistance, they talk  
6 about the management structure; they talk about laydown  
7 procedures with respect to equipment and equipment necessary.  
8 And there is a huge coordination with respect to supplies and the  
9 availability of resources.

10 Mr. Long. Okay. What role do state or federal emergency  
11 operations officials have in monitoring the use of mutual  
12 assistance and to ensure that it is applied to the most critical  
13 areas?

14 Ms. Hoffman. So, this is real interesting, and I thank you  
15 for bringing up the point. What we deal with is, first and  
16 foremost, the utilities are in a leadership position, as they  
17 should be, for providing response and recovery. The federal  
18 agency and the federal government and the Department of Energy,  
19 what we do is help understand when is it outside the ability of  
20 a utility to be able to manage their response and recovery efforts,  
21 and what are the resources that are required, the gaps that are  
22 needed in providing support. So, whether it is transportation  
23 issues, access issues. And so, that is the activities that the  
24 Department of Energy and the federal government help with. And  
25 that is whether it is hours of service waivers, whether it is

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 weight restriction waivers, whether it is understanding if there  
2 is a priority, whether it is a heavy load like a chemical facility  
3 or a pharmaceutical or a hospital, what some of those restoration  
4 needs are.

5 Mr. Long. Speaking of the federal government, what does the  
6 federal government do to remove regulatory roadblocks to recovery  
7 and repair efforts, and are there areas that we can improve in  
8 those?

9 Ms. Hoffman. So, the efforts that the federal government  
10 does and looks at are from a waiver point of view. So, looking  
11 at access to any sort of damaged area, to making sure that the  
12 utilities -- I guess where I would go with this answer is I will  
13 be very pointed here. It is that utilities nowadays are very much  
14 seen as emergency responders. Typically, that has been the  
15 health and the safety side of things. But now, as you look at  
16 critical infrastructure and as you look at the needs moving  
17 forward, telecommunications and electricity are primary for  
18 providing an effective restoration process and life and safety.  
19 And so, access for utilities in a damaged infrastructure  
20 environment, being able to be forward-leaning in getting utility  
21 resources there, are absolutely critical as we move forward. And  
22 it is going to be more critical as we look at onsite generation  
23 and being able to restore power.

24 Mr. Long. Okay. Thank you.

25 And will the Department of Energy be working with the states

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 and territories impacted by these recent hurricanes to assess grid  
2 resiliency efforts and identify ways to improve grid resiliency?

3 Ms. Hoffman. Yes.

4 Mr. Long. Okay. I wish we had time today for an EMP  
5 discussion with all of you, but perhaps another day. It seems  
6 like our time is taken up today with talking about the Astros all  
7 the time.

8 Mr. Chairman, I yield back.

9 Ms. Hoffman. I look forward to future conversations on  
10 that.

11 Mr. Olson. The conversation is a problem, my friend, about  
12 the Astros? Is that a big problem?

13 The gentleman yields back.

14 The Chair now calls upon the gentleman from New York 20,  
15 including the state capital of Albany, Mr. Tonko, for 5 minutes.

16 Mr. Tonko. Thank you, Mr. Chair.

17 While we hear about restoration working along in some of our  
18 states, many of our fellow Americans in Puerto Rico and the United  
19 States Virgin Islands remain in the middle of the most serious  
20 blackout in United States history. Restoring services is  
21 absolutely critical, but we also need to acknowledge the risks  
22 of this happening again and the need to support the development  
23 of a more resilient grid moving forward.

24 Over the last decade, extreme weather and fire events have  
25 cost the federal government well over \$350 billion, according to

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 the Office of Management and Budget. A GAO report last week  
2 estimated that these costs will likely rise in the future, due  
3 to the effects of climate change. This is not a choice between  
4 pay now or pay later. It is a pay now by supporting research,  
5 hardening infrastructure, and making meaningful investments to  
6 adapt to and mitigate climate change, or pay now in multibillion  
7 dollar emergency spending packages. The fiscally-sensible  
8 approach is to acknowledge the risk posed by extreme weather and  
9 to make the necessary investments that will mitigate it.

10 We just passed the five-year anniversary of Superstorm Sandy  
11 hitting the Northeast. We have seen a lot of effort in New York  
12 to build a more resilient grid, but the experience of Sandy shows  
13 that rebuilding takes time. And it is clear that lessons learned  
14 from one disaster can make future response and recovery more  
15 effective. We have been learning from Sandy. We are learning  
16 from Harvey, from Irma, and from Maria, and the learning will  
17 continue until we address some of the preventative measures.

18 So, Ms. Hoffman, your testimony mentioned that Florida Power  
19 & Light has made major investments since 2006 to build a more  
20 storm-resilient grid. Similar work has been done in New York  
21 State in regard to Sandy. How can a smarter, modernized grid be  
22 more resilient?

23 Ms. Hoffman. So, thank you, Congressman, for the question.

24 A smarter grid allows for advanced communications and  
25 controls. It allows for rerouting power. It allows for an

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 accelerated situational awareness.

2 So, let's first talk situational awareness and the ability  
3 to have smart meters and you are able to have better visibility  
4 into your system, be able to isolate damage, be able to reroute  
5 power. And so, having that ability allows you to be  
6 forward-leaning on placement of resources, to have a very  
7 effective restoration process, well-planned, well-distributed  
8 with respect to priorities and how a restoration process can be  
9 done.

10 With respect to being able to reroute power, you can really  
11 look at isolating customers and being able to make sure that you  
12 can restore most of, a large number of customers quickly, as well  
13 as prevent damage to additional customers unnecessarily.

14 Mr. Tonko. Thank you.

15 And, Ms. Walker, can you explain how grid modernization  
16 efforts in Texas, advanced meters, and others, aided in a more  
17 rapid recovery there?

18 Ms. Walker. Yes, sir. Thank you for the question.

19 The advanced meter systems that we have -- we have them  
20 through most of the ERCOT region -- were very helpful. It  
21 notified the utilities of when those customers were out. So, they  
22 knew where those customers were located. It also helped, as Ms.  
23 Hoffman said, in rerouting and knowing where they needed to send  
24 their crews, and being able to reroute electricity to serve people  
25 in a more timely fashion. So, we found that it was very helpful

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 to have the advanced meter systems and the new technologies.

2 Mr. Tonko. Thank you.

3 And DOE's quadrennial energy review heavily focused on  
4 critical infrastructure interdependencies. I am particularly  
5 concerned by the harrowing statistics of Puerto Ricans without  
6 access to safe drinking water. Water, telecommunications,  
7 hospital, and public safety infrastructure are dependent on  
8 electricity.

9 So, Ms. Hoffman, is a more resilient grid system, perhaps  
10 one that includes microgrids, distributed generation, and  
11 storage, important for supporting rapid response and recovery in  
12 regard to and in interaction with these other critical  
13 infrastructure needs?

14 Ms. Hoffman. So, thank you, Congressman.

15 Using a microgrid in a smart fashion around critical  
16 infrastructure is absolutely important. As you look at  
17 telecommunications, as you look at water and wastewater treatment  
18 plants, it is really how do we harden those areas to allow for  
19 them to either sustain or be able to recover quickly. And having  
20 generation closer to these critical loads, through the form of  
21 a microgrid, is absolutely important. I know that ConEd and areas  
22 in New York are also looking at how do they harden their  
23 infrastructure.

24 And I do want to say I appreciate NIPA and their efforts in  
25 going down to Puerto Rico as well and supporting the recovery

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 efforts.

2 Mr. Tonko. Thank you.

3 Has there been any interaction with EPA and DOE in regard  
4 to this interdependency on infrastructure?

5 Ms. Hoffman. Sorry, you said EPA?

6 Mr. Tonko. Yes. Any efforts with drinking water, DOE, and  
7 the infrastructure, the electric utility?

8 Ms. Hoffman. Thank you very much. I understand.

9 Through the Electric Sector Coordinating Council and through  
10 our responsibility as a sector-specific agency, we have had  
11 coordination discussions with the telecommunication sectors and  
12 some of the other critical infrastructure sectors to think about  
13 how do we really move forward from a restoration process, from  
14 a hardening process, from an advanced technology process, from  
15 a coordination process, and moving forward and strengthening our  
16 economy.

17 Mr. Tonko. Thank you so much.

18 Mr. Chair, I yield back. And congratulations.

19 Mr. Olson. Thank you. The gentleman's time has expired.

20 The Chair now calls upon the gentleman from Florida, Mr.  
21 Bilirakis, for 5 minutes.

22 Mr. Bilirakis. Thank you, Mr. Chairman. Thanks for  
23 allowing me to sit on the committee.

24 And then, also, I want to congratulate you on the Astros'  
25 victory. They are a model. They really accomplished quite a bit

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 this year, and I like the way they rebuilt their team.

2 So, anyway, can I have an extra 2 minutes because of that?

3 Mr. Olson. As long as you want to talk like that, you can  
4 have 10 minutes.

5 [Laughter.]

6 Mr. Bilirakis. All right, but I am going to root for another  
7 team next year. You know that.

8 But, in any case, I wanted to talk about -- Ms. Walker, if  
9 I can ask you a couple of questions? I understand that there is  
10 a site prioritization when utilities are being restored and in  
11 the midst of a response resources are often spread thin. If there  
12 are two hospitals -- this is a question -- if there are two  
13 hospitals in a given area, how do utilities determine which  
14 facility is responded to first?

15 Ms. Walker. Well, in Texas the hospitals by statute are  
16 required to have backup generation. So, they do have that  
17 requirement. I am not sure how they are decided which one they  
18 respond to first. I know that for CenterPoint Energy during  
19 Hurricane Ike that that was the first areas that the company went  
20 to, was to the hospitals. So that all of the personnel were trying  
21 to restore service to those. So, I am not for sure and I would  
22 have to look into how they would decide between two.

23 Mr. Bilirakis. Thank you.

24 What role do utility companies play in crafting a state's  
25 disaster response plan and determining which sites are

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 prioritized?

2 Ms. Walker. They have complete power to come up with their  
3 plan on how to restore power. The Commission does have levels  
4 that we ask them to look at, which are the critical structures  
5 such as hospitals. By statute, they also have to respond to  
6 nursing homes. We clearly have them respond to refineries and  
7 things in the ship channel. So, there is a tier, but the utilities  
8 are responsible for setting their own priorities.

9 Mr. Bilirakis. Thank you.

10 How much flexibility does a utility company have in  
11 determining which sites are restored first?

12 Ms. Walker. They have a lot in Texas. They do work, and  
13 Texas recovery is at the local level, so they do work also with  
14 their counties and their cities to make those determinations.  
15 But the utilities in Texas have a significant amount of  
16 determination on how they restore power.

17 Mr. Bilirakis. Thank you.

18 The next question to the panel, what challenges still exist  
19 for Florida and what are your post-storm recommendations? What  
20 DOE resources are available to the communities like mine impacted  
21 by Irma? Who would like to be first?

22 Ms. Hoffman. I will start. Florida had a very effective  
23 restoration process. They had the arrangements from a mutual  
24 assistance point of view. They looked at, and their investments  
25 in the infrastructure have helped with, hardening their systems.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Their advanced control and metering has advanced their  
2 capabilities. At this stage in the game, Florida really looked  
3 at their codes and standards from a perspective of a Category 3  
4 hurricane. As we are looking at Category 4 hurricanes and  
5 additional hurricanes, I think now it comes down to, what are some  
6 of the additional new capabilities to mitigate a Category 4 and  
7 higher-level hurricanes that they are going to have to consider?

8 I think from a fuel distribution point of view, that was the  
9 one area of looking at distributing fuel. Gasoline was a  
10 challenge in Florida, but I think it was also partly that the  
11 necessary evacuation that occurred had a run-on on gasoline  
12 stations. And so, it looks at, they did advance by having  
13 generation hookup. So, from an electrical point of view, they  
14 advanced capabilities there. But if I had one area, it is  
15 probably look at the distribution network with respect to  
16 gasoline.

17 Mr. Bilirakis. The fuel issue, yes, definitely. We were  
18 very fortunate in the Tampa Bay area, I think as you know, to dodge  
19 the Category 3 or 4, but God forbid we have one.

20 So, anyone else want to comment? I don't have much time.  
21 I know I asked for an additional couple, but I was just kidding.  
22 But does anyone else want to comment on that? Any suggestions?

23 [No response.]

24 That is great input. I really appreciate that.

25 Thank you very much, Mr. Chairman. I yield back.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Mr. Olson. The gentleman is always welcome here. He yields  
2 back.

3 The Chair now calls upon the man who is working very hard  
4 for a bipartisan agreement to allow me to wear this jersey on the  
5 House Floor later today, Gene Green from Houston, Texas, 5  
6 minutes.

7 [Laughter.]

8 Mr. Green. I thank my colleague and neighbor for yielding  
9 to me.

10 For our colleague from Florida, I know there were some  
11 problems with gasoline supplies there, and maybe you can tell me,  
12 does Florida import all your gasoline and diesel? I didn't know  
13 if you had any refineries in Florida. Okay. Well, that is okay  
14 because we want to keep selling you the stuff we produce in Texas  
15 and Louisiana.

16 But, anyway, being a native Houstonian and going through lots  
17 of storms and hurricanes over the years, Harvey was probably the  
18 toughest, even compared to Hurricane Carla who hit us in 1960,  
19 1961. But every eight years we have a tropical storm or a  
20 hurricane. In 2008, we had Hurricane Ike, which damaged our  
21 infrastructure because it was a wind storm, the storm surge, but  
22 the wind. By the time Harvey got to Harris County, it was mostly  
23 rain. And our biggest problem was typically so much rain that  
24 it overflowed a lot of our sanitary sewer systems in the west side  
25 of Houston, and even Houston facilities and our smaller cities

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 and how that did.

2 But, somewhere along the way when we have these thousand-year  
3 storms that are happening so often, and the average rainfall in  
4 Houston is 49 inches a year and you get 52 inches in five days,  
5 I don't know how we can deal with it. We just have to dig more  
6 reservoirs, spend more money to contain that water, because water  
7 is a precious commodity and we need to do it, instead of letting  
8 it go into the Gulf of Mexico.

9 This is the first storm that I have had where I have had  
10 fatalities in our district. We lost eight people in our district.  
11 Two of them were breadwinners in their family, because they  
12 thought they could go through this high water in an underpass.

13 But the sad one was that we lost a family of six in our  
14 district on Greens Bayou, northeast Houston. The bayou, we have  
15 been working on it for decades to build detention ponds upstream,  
16 but the family turned off into the bayou, literally, because they  
17 thought it was the road. And it was widely publicized the family  
18 was missing, but we didn't find them until after the water went  
19 down down in Greens Bayou, northeast Harris County.

20 But, as far as for the utilities, we didn't have that big  
21 a problem. But, as we are sitting here, we will get another  
22 hurricane or a tropical storm. And so, that is what I am concerned  
23 about.

24 It is important we try to learn from these lessons of these  
25 storms. We are in the middle now of building back houses, shops,

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 and communities, but we know we have to do better on the flood  
2 infrastructure, both working with the Corps of Engineers and in  
3 Harris County. We have a Harris County Flood Control District.  
4 We tax ourselves to keep from flooding in Harris County, so we  
5 can partner with the Corps. But it is essential that we fund the  
6 Corps of Engineers, FEMA, and other related agencies in our next  
7 supplemental.

8 I am concerned about Puerto Rico because their electric grid  
9 was in pretty bad shape even before. And some of us were talking  
10 on the Energy Subcommittee a week ago about this may give us the  
11 opportunity for the United States to actually provide an electric  
12 system in Puerto Rico, because I understand they are still burning  
13 fuel oil.

14 Again, coming from Texas, we can put all the windmills up  
15 and all the solar, which you can't get wind and solar. We would  
16 be glad to have an LNG export/import facility there, because, one,  
17 it would be much cleaner than fuel oil. It would probably be  
18 cheaper, too, because the price of natural gas is relatively  
19 cheap.

20 I would just like to ask -- like I said, I have driven around  
21 Puerto Rico, but I don't live there and I don't represent it, but  
22 I know they need help in getting literally the whole grid back  
23 up. Is that something that we could look at through the  
24 Department of Energy to see if we could redo the grid in Puerto  
25 Rico to where it would be brought up to what we would consider

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 standards?

2 Ms. Hoffman. I think it is an opportunity to look at all  
3 technologies and different solutions for investment in Puerto  
4 Rico, and looking at how we can harden the system. But everything  
5 should be on the table of what advancements can be done with  
6 respect to their energy infrastructure. Forty-seven percent of  
7 Puerto Rico electricity comes from petroleum, 34 percent from  
8 natural gas, 17 percent from coal, and 2 percent of renewable  
9 energy. And so, there is a lot of opportunities to think about  
10 the generation mix as well as the location of generation, and the  
11 use of the transmission and distribution system, as well as  
12 demand/response and customer engagement.

13 Mr. Green. Yes. Well, I know in Texas we have had success  
14 with the wind power, not only in west Texas, but south Texas, and  
15 it gives us that type of opportunity to have a different fuel  
16 supply, although it is hard today to heat with low-price natural  
17 gas. That is why some of our coal plants are problems.

18 Ms. Walker, in your testimony you said that the PUCT's  
19 initial assessment of the Texas utilities is that they did an  
20 outstanding job of responding to the storm. And I know over the  
21 years we have had partnerships with other states and other  
22 communities, that we will send our utility workers up there when  
23 they have a problem. When there are ice storms in Dallas, we will  
24 take care of that. But I don't remember seeing that much in the  
25 Houston or southeast Texas area.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 Ms. Walker. Mutual assistance?

2 Mr. Green. Yes.

3 Ms. Walker. There probably wasn't that much because the  
4 damage was very different and the cause of the outages was very  
5 different. Usually, the mutual assistance comes in to repair  
6 wind damage, the poles going own, the wires going down. Houston  
7 and Beaumont was flooding. And so, most of that was due to the  
8 substations being out. And so, once we were able to get these  
9 mobile substations in or the waters recede and get those  
10 substations back up and running, we were able to restore the  
11 customers.

12 The outages in those areas really weren't very long-lasting.  
13 They were more like a thunderstorm. And Houston and CenterPoint  
14 Energy and Entergy were continually restoring customers. And so,  
15 their numbers were very low on an ongoing basis, although they  
16 ultimately restored a lot of people.

17 Mr. Green. And that is why it worries me, because here in  
18 Puerto Rico I think they are still only about 30 percent of the  
19 power that has been restored. So, it is really a case that we  
20 need to work on.

21 So, thank you, Mr. Chairman. I yield back.

22 Mr. Olson. The gentleman's time has expired.

23 Seeing no members seeking to ask questions, the Chair wants  
24 to thank our five witnesses. Thank you, thank you, thank you for  
25 coming here today.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 I remind our witnesses that every member can submit questions  
2 for the record for 10 days. Once you get that, you have 10 days  
3 to respond.

4 Mr. Rush. Mr. Chairman, I request, I would like to make a  
5 statement.

6 Mr. Olson. Yes, sir, you have a minute, Bobby.

7 Mr. Rush. A minute? Thank you, Mr. Chairman.

8 Mr. Chairman, I must say, with all due respect, as we conclude  
9 this panel and are getting ready and prepare to introduce the next  
10 panel, with all due respect, Mr. Chairman, I simply smell a rat  
11 here. I really smell a rat.

12 PREPA's lack of response to this subcommittee's efforts to  
13 invite them to attend and provide witness testimony to this  
14 subcommittee is most disgusting and extremely disrespectful.  
15 Mr. Chairman, that said, I strongly request that we use our  
16 subpoena authority to demand that PREPA come to this subcommittee  
17 and disclose to Members of Congress who are members of the  
18 subcommittee what were the facts involved in its awarding this  
19 \$300 million contract, which I call the sweetest of sweetheart  
20 deals, to repair and reconstruct Puerto Rico's electrical  
21 infrastructure.

22 And I also believe, Mr. Chairman, that as has been stated  
23 by members of both sides during this panel, that FEMA should also  
24 be invited to be at the same witness table. Mr. Chairman, we ought  
25 to get to the bottom of this, and we have got to know what happened,

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 when did it happen, and who is responsible for this absurd  
2 sweetheart deal that is going to result in numerous people paying  
3 an extraordinary additional amount of millions of dollars because  
4 of the delay in the withdrawal of this contract.

5 So, I really request that we use our subpoena authority to  
6 make sure that PREPA stop disrespecting the United States  
7 Congress.

8 Thank you. I yield back.

9 Mr. Olson. And, my friend, I share your concerns. It  
10 sounds kind of odd, what happened there, but I will talk to the  
11 Chair for the subcommittee, Mr. Upton, and the full committee,  
12 Mr. Walden, about the subpoena issue.

13 But, right now, a point of personal privilege before the  
14 first panel leaves, and this is maybe at the risk of offending  
15 Ms. Castor. But, Commissioner Walker, I hope you are going to  
16 SMU Saturday, joining my daughter and my wife to watch SMU beat  
17 the tar out of Central Florida.

18 [Laughter.]

19 The panel is dismissed.

20 Okay. Second panel, are you all ready? And just like  
21 before, we will start out with opening statements from all of the  
22 panelists, followed by questions from members.

23 And I recognize Thomas Fanning. Tom is the President and  
24 CEO of Southern Company. He is here on behalf of the Electricity  
25 Subsector Coordinating Council.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1

Tom, you have 5 minutes for an opening statement.

1 STATEMENTS OF THOMAS FANNING, PRESIDENT AND CEO, SOUTHERN  
2 COMPANY, ON BEHALF OF THE ELECTRICITY SUBSECTOR COORDINATING  
3 COUNCIL; JULIO A. RHYMER, SR., EXECUTIVE DIRECTOR, VIRGIN ISLANDS  
4 WATER & POWER AUTHORITY; CHET THOMPSON, PRESIDENT AND CEO,  
5 AMERICAN FUEL & PETROCHEMICAL MANUFACTURERS; MAX MCBRAYER, CHIEF  
6 SUPPLY OFFICER, RACETRAC PETROLEUM, INC., ON BEHALF OF THE  
7 NATIONAL ASSOCIATION OF CONVENIENCE STORES AND THE SOCIETY OF  
8 INDEPENDENT GASOLINE MARKETERS OF AMERICA; RAMON LUIS NIEVES,  
9 ATTORNEY AT LAW, FORMER MEMBER, SENATE OF PUERTO RICO, AND  
10 CATHERINE B. KENNEDY, VICE PRESIDENT, NATIONAL NURSES UNITED  
11

12 STATEMENT OF THOMAS FANNING

13 Mr. Fanning. Thank you. Thank you for inviting me to  
14 testify today.

15 My name is Tom Fanning. I am the Chairman, President, and  
16 CEO of Southern Company. I am also the Immediate Past Chairman  
17 of the Edison Electric Institute, the association that represents  
18 all U.S. investor-owned electric companies. However, I am  
19 addressing you today in my role as one of three Co-Chairs of the  
20 Electricity Subsector Coordinating Council. We collaborate  
21 closely with our colleagues from public power utilities and rural  
22 electric cooperatives on the ESCC.

23 I am pleased to address the subcommittee and to share the  
24 steps the electric power industry is taking to make energy  
25 infrastructure smarter and more resilient, allowing us to

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 continue delivering affordable and reliable power.

2 The 2017 hurricane season highlights the critical importance  
3 of cooperation and coordination among electric utility companies,  
4 the government, and other key infrastructure industries to ensure  
5 fast, efficient recovery for customers.

6 The electric sector faces constantly-evolving threats to the  
7 energy grid. The industry's risk mitigation strategy emphasizes  
8 a defense-in-depth approach. We focus on preparation,  
9 prevention, response, and recovery, with an emphasis on the  
10 isolation of and enhanced protections for critical assets.

11 While this hearing is focused on storm response and recovery,  
12 it is important to note that our companies do not build the energy  
13 grid or our security responses to meet only one type of threat.  
14 We must prepare and plan for them all, whether manmade or natural,  
15 malicious or unintentional, relating to the cyber or physical  
16 security, or a combination of threats.

17 Weather is an unavoidable part of our business. In the  
18 aftermath of such events, the industry works to identify gaps,  
19 compile lessons learned, and disseminate best practices. As an  
20 industry, we strive to be better today than we were yesterday and  
21 to be better tomorrow than we are today.

22 Since Superstorm Sandy five years ago this week, the electric  
23 power industry has combined efforts across all segments of the  
24 industry and has worked with the government partners to streamline  
25 restoration efforts and to improve preparation for and response

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1 to major threats that cause significant outages.

2 The benefits of this coordination were visible over the past  
3 several months as the industry and federal government worked to  
4 prepare for and respond to the hurricanes. There is an  
5 understandable urge to compare storms, but the reality is that  
6 each storm is different. The common threads, however, are the  
7 need for resilient infrastructure, a plan for response and  
8 recovery, and the awesome nature of our industry's ability to  
9 respond to emergencies.

10 Before I close, I would like to underscore the importance  
11 of the ESCC. During the most recent storms, the ESCC held daily  
12 coordination calls among impacted companies and government  
13 officials to address critical operational issues such as  
14 identifying specialized equipment needs, removing temporary  
15 flight restrictions for both manned and unmanned aircraft to  
16 assist with aerial damage assessments, coordinating how industry  
17 could re-enter and access disaster areas, and coordinating  
18 response efforts with the oil and natural gas,  
19 telecommunications, transportation, and water and wastewater  
20 sectors.

21 Energy Secretary Rick Perry was on every call and was  
22 frequently joined by other officials such as Homeland Security  
23 Acting Secretary Elaine Duke. These calls were essential to  
24 identify and address critical issues in the response and recovery  
25 efforts.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           The reliability and resiliency of the energy grip are of  
2 paramount importance. Our customers expect the lights to go on  
3 when they flip a switch. When the power goes out, our customers  
4 expect that it will be on soon.

5           The electric power sector will continue to strive to meet  
6 those expectations through a multilayered strategy, to invest in  
7 smart energy infrastructure, continuous enhancement of our  
8 industry/government partnership, and the grit of the amazing men  
9 and women who make the energy grid work day-in and day-out.

10          The subcommittee is showing great leadership with its focus  
11 on preparedness, and we look forward to working with you on this  
12 critical topic.

13          Thank you again for the opportunity to testify on behalf of  
14 the ESCC, and I look forward to your questions.

15          [The prepared statement of Mr. Fanning follows:]

16  
17 \*\*\*\*\* INSERT 8\*\*\*\*\*

1 Mr. Olson. Thank you, Mr. Fanning.

2 And now, the Chair is glad to call upon Mr. Julio Rhymer,  
3 the Executive Director of the Virgin Islands Water & Power  
4 Authority, that suffered devastation from two hurricanes, Irma  
5 and Maria. A 5-minute opening statement, Mr. Rhymer. Thank you.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS

WASHINGTON, D.C. 20005-3701

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1 STATEMENT OF JULIO A. RHYMER, SR.

2

3 Mr. Rhymer. Good evening, Mr. Chair, other honorable  
4 members of the Subcommittee on Energy.

5 My name is Julio A. Rhymer, Sr. I am an Executive Director  
6 and Chief Executive Officer of the Virgin Islands Water & Power  
7 Authority.

8 On behalf of the governor of the Virgin Islands, the  
9 honorable Kenneth E. Mapp; the Virgin Island Delegate to Congress,  
10 Honorable Stacy Plaskett; the members of the 32nd Legislature of  
11 the Virgin Islands, and the Governing Board of WAPA, I thank you  
12 for the invitation to provide testimony on the energy challenges  
13 facing the U.S. Virgin Islands as a result of the passage of  
14 Hurricanes Irma and Maria.

15 As you all are aware, in September of 2017, the Virgin Islands  
16 faced the phenomenon of two back-to-back Category 5 hurricanes  
17 within two weeks. According to the Saffir-Simpson Wind Scale,  
18 a Category 5 hurricane has sustained winds of greater than 157  
19 miles per hour. There were cases in Hurricane Irma that winds  
20 were sustained at above 190 miles an hour.

21 WAPA's transmission and distribution facilities were, plain  
22 and simple, destroyed by the catastrophic winds of two hurricanes.  
23 Due to Hurricane Irma's impact on September 6th, 2017, the St.  
24 Thomas, St. John, Water Island, and Hassel Island electrical  
25 transmission distribution system suffered significant damage.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

www.nealrgross.com

1 The St. Thomas system sustained damages of approximately 80  
2 percent; St. John, approximately 90 percent; Water Island, 90  
3 percent, and Hassel Island, 90 percent.

4 Approximately two weeks later, on Tuesday, September 19th,  
5 2017, Hurricane Maria caused damage to almost 60 percent of the  
6 transmission and distribution system on St. Croix. The islands  
7 of St. Thomas, St. John, Water Island, and Hassel Island did not  
8 receive any significant damage from a result of Hurricane Maria.

9 To date, the Authority has approximately 536 linemen and  
10 other related off-island personnel in the territory, restoring  
11 WAPA's electrical infrastructure. With the assistance of FEMA,  
12 naval vessels and cruise ships have been brought in to provide  
13 sleeping quarters for the off-island crews, since many hotels and  
14 guesthouses throughout the territory remain closed after  
15 sustaining major damages during these two hurricanes.

16 By far, the biggest challenge that I would like to focus on  
17 today is funding the day-to-day operations and hardening of the  
18 system in the event of future storms. Without question, these  
19 hurricanes have decimated WAPA's finances. While we appreciate  
20 the assistance that has been, and will be, forthcoming to rebuild  
21 the systems that were damaged, one of our primary concerns as the  
22 Authority is the ability to meet pre-storm expenses. Prior to  
23 hurricanes, the Authority's revenues were approximately \$25.6  
24 million per month. Since the hurricanes events, and since we are  
25 unable to provide electrical service and bill customers, revenues

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 have dropped below \$2 million per month.

2 WAPA has reoccurring expenses such as payroll, insurance,  
3 plant operation and maintenance, debt service, and  
4 previously-executed contracts, and financing agreements it must  
5 pay. To address this dramatic shortfall, the Authority has  
6 sought, through the government of the Virgin Islands, a community  
7 disaster loan. Any support or assistance that you can offer in  
8 this regard is appreciated.

9 One of the evident takeaways from the two Category 5  
10 hurricanes, and significant damages to this regional system  
11 territory-wide, is that there is an urgent need for WAPA to rebuild  
12 its transmission and distribution systems, but to harden it to  
13 a point where it is resilient to wind storms. WAPA believes it  
14 would significantly reduce its post-storm hurricane period by  
15 undergoing more of its critical infrastructure and by moving away  
16 from wooden poles and introducing composite poles on the major  
17 distribution circuits.

18 WAPA must also address its grid, since it is too susceptible  
19 to damage from wind storms. WAPA had a proposed plan to construct  
20 a series of microgrids on each island. Each microgrid would be  
21 a localized group of electrical facilities that would either work  
22 in tandem with the generating facilities or an option for  
23 disconnection where they can stand alone. In the event the power  
24 and the main grid is interrupted for any reason, the microgrid  
25 would function as a small facility generating its own power at

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 this point.

2 Currently, you have in the works a microgrid on the island  
3 of St. Croix that is actually going to go out for bid, and that  
4 will provide, basically, power through solar and battery storage  
5 to our airport facilities, a waste treatment facility, a  
6 correctional facility, and, basically, a police station at this  
7 point. What we are actually attempting to do here, as a utility  
8 moving forward, is to harden our system, No. 1, and, basically,  
9 make it more resilient by having microgrids.

10 I would like to thank you for the opportunity to appear before  
11 the Subcommittee on Energy. I am available to answer any question  
12 that you may have on this matter.

13 [The prepared statement of Mr. Rhymer follows:]

14

15 \*\*\*\*\* INSERT 9\*\*\*\*\*

1           Mr. Olson. Thank you, Mr. Rhymer. And I heard what Irma  
2 didn't destroy, Maria drowned.

3           Mr. Rhymer. Yes, it did.

4           Mr. Olson. The Chair now calls upon Mr. Chet Thompson.  
5 Chet is the President and CEO of the American Fuels & Petrochemical  
6 Manufacturers.

7           Mr. Thompson, you have 5 minutes for an opening statement.

## 1 STATEMENT OF CHET THOMPSON

2  
3 Mr. Thompson. Thank you, Mr. Vice Chairman, Ranking Member  
4 Rush, and members of the subcommittee. Thank you for having me  
5 here today.

6 My name is Chet Thompson. I am the President and CEO of the  
7 American Fuel & Petrochemical Manufacturers. AFPM represents  
8 the refining and petrochemical industries. Our members  
9 represent 120 refineries, 140 petrochemical facilities. That  
10 represents 98 percent of U.S. production capacity. More than  
11 half of that capacity is located along the Gulf Coast.

12 Hurricane Harvey impacted our facilities in the fuel supply  
13 chain very hard. Hurricane Irma impacted the fuel supply chain,  
14 but largely in Florida, while Nate's impact on our assets was  
15 rather minimal.

16 But, more importantly, the combination of Hurricanes Harvey,  
17 Irma, and Maria were devastating to the people of the Gulf Coast,  
18 particularly those in Houston and the Beaumont area, Florida, and  
19 Puerto Rico. Many of those impacted are part of our extended oil  
20 and gas family. Our hearts and prayers continue to go out to those  
21 still struggling to recovery, and we stand by them and will help  
22 them any way we can.

23 As a result of this personal impact on us, the subject of  
24 today's hearing is particularly important to our industry. So,  
25 I would like to limit my time this afternoon only to three key

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 points of my written testimony.

2 First, by and large, the U.S. refining and petrochemical  
3 industries weathered the storm fairly well and proved to be very  
4 resilient. This did not happen by accident. Rather, it was the  
5 result of lots of hard work and preparation, and with the help  
6 of an incredibly dedicated workforce and federal, state, and local  
7 first responders. They are the true heroes coming out of these  
8 events.

9 If you wanted to draw the storm up that could wreak the most  
10 havoc on our industry, Harvey was it. Harvey hit Corpus Christi  
11 as a Category 4 storm, moved right up the east coast, stalled  
12 largely over Houston, which is the epicenter of the refining and  
13 petrochemical industries. It dumped over 60 inches of rain in  
14 some locations and more than a trillion gallons of water across  
15 Texas and Louisiana.

16 At its peak, Harvey knocked 24 of our refineries offline.  
17 That represents 25 percent of all U.S. refining capacity. It had  
18 a similar impact on our petrochemical members. It knocked 60  
19 percent of U.S. petrochemical capacity down. That is 80 percent  
20 of the capacity found in the Gulf Region.

21 Harvey also had a significant impact on the entire fuel  
22 supply chain. It shut down ports, pipelines, terminals, rail,  
23 and certainly gasoline stations. Our facilities couldn't get  
24 feed into their plants, and we certainly couldn't get products  
25 out.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           This had the potential to be catastrophic for the fuels and  
2 petrochemical supply chains, but in the end it wasn't. Just two  
3 weeks after Harvey made landfall, 20 of the 24 facilities that  
4 went down had restarted. And the petrochemical facilities made  
5 substantial progress during this period as well.

6           Again, this was not by accident. Facilities were prepared  
7 for the storms. They had applied many of the lessons learned in  
8 the aftermaths of previous storms like Katrina and Rita. For  
9 example, our facilities developed more sophisticated  
10 preparedness plans, improved storm monitoring, hardened critical  
11 infrastructure, elevated pumps and generators, procured spare  
12 parts so we could be ready to move with recovery efforts after  
13 the storm. We upgraded our IT systems to help us locate employees  
14 and ensure that they had the assistance they needed. All of this  
15 made a difference. We came back online much faster than we did  
16 after prior storms.

17           The second point I would like to make, the federal and state  
18 response was significantly improved compared to previous storms.  
19 One of the lessons we have learned is that we have to better  
20 coordinate federal, state, and local governments. So, over the  
21 last few years, we have been working hard in that regard, working  
22 closely with DOE and DHS to improve our relationships.

23           The results during Harvey, in particular, were excellent.  
24 We were in constant contact before, during, and after the storms.  
25 The improved coordination was most evident in the quick review

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 and approval of fuel waivers, unlike in prior storms, helping us  
2 get fuel to where it was needed quickly and efficiently. Our  
3 federal and state partners, particularly Secretary Perry,  
4 Administrator Pruitt, Governors Abbott and Scott, deserve kudos  
5 for these improvements.

6 If I had to identify the one area that could be improved,  
7 it would be better communication by our government to consumers  
8 about the fuel supply chain and the challenges that often  
9 accompany events like hurricanes. For example, the government  
10 could help us explain the timelines for bringing facilities back  
11 online and getting products back to the distributors and the  
12 marketers. And it could also help us discourage panic buying that  
13 always seems to accompany these types of events.

14 Third and finally, as always, our companies will work with  
15 federal and state authorities to identify and apply lessons  
16 learned. Although we did fare fairly well, no doubt there are  
17 going to be things we can learn and improve upon to make future  
18 responses even better. We would caution anyone to resort to any  
19 knee-jerk reactions or conclusions, particularly those based on  
20 a few isolated events, before full assessments are in.

21 So, I know I am running out of time. I thank everyone for  
22 my time and the opportunity to speak today.

23 And again, I would like to express our thanks and  
24 appreciation for our incredible workforce and our first  
25 responders. They certainly deserve our appreciation.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 So, thank you, and I am happy to answer any questions.

2 [The prepared statement of Mr. Thompson follows:]

3

4 \*\*\*\*\* INSERT 10\*\*\*\*\*

1 Mr. Olson. Thank you, Mr. Thompson.

2 The Chair now calls upon Mr. Max McBrayer. Max is the Chief

3 Supply Officer for RaceTrac Petroleum, Incorporated.

4 You have 5 minutes, sir.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS

WASHINGTON, D.C. 20005-3701

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

## 1 STATEMENT OF MAX MCBRAYER

2  
3 Mr. McBrayer. Thank you. Mr. Vice Chairman, Mr. Ranking  
4 Member, and members of the subcommittee, thank you for the  
5 opportunity to testify today on the retail community's response  
6 efforts to 2017 hurricane season.

7 My name is Max McBrayer. I am the Chief Supply Officer and  
8 the Chief Financial Officer of RaceTrac Petroleum, Inc. I am  
9 testifying today on behalf of the National Association of  
10 Convenience Stores and the Society of Independent Gasoline  
11 Marketers of America. RaceTrac is a family-owned business,  
12 headquartered in Atlanta, Georgia, operating more than 450  
13 convenience stores across 12 states and employing nearly 9,000  
14 team members.

15 The 2017 hurricane season had a devastating effect on  
16 America's fuels infrastructure and markets. During Hurricane  
17 Harvey, flooding damaged more than a quarter of the U.S. refining  
18 capacity and shut down fuel pipelines. This put severe strain  
19 on the domestic fuel supply. Hurricane Irma led to an increased  
20 demand for fuel in Florida, further straining the fuels market  
21 and causing prices to rise sharply.

22 Natural disasters directly and severely affect the retail  
23 fuels market. Margin on fuel sales range between 2 and 20 cents,  
24 and retailers must constantly react to changes in supply and  
25 demand to ensure their prices remain competitive.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           During any severe weather event, wholesale fuel prices  
2 become more volatile as the market tries to assess and anticipate  
3 supply availability. When these unwelcome changes occur,  
4 retailers respond to meet their cost.

5           Due to the infrastructure damage, compliant fuel inventories  
6 became strained, leading to escalating wholesale prices. Retail  
7 market prices generally reflect rapid increase in the wholesale  
8 prices. In this instance, fuel retailers made individual  
9 decisions on whether to increase prices and risk losing customers  
10 or potentially take losses by keeping prices low and not covering  
11 the increased wholesale cost.

12           Despite the tough situations, the fuel market was supported  
13 by the actions of both the federal government and the state  
14 governments. The governments worked with us to deal with the  
15 issues before, during, and after the hurricanes.

16           Communication and coordination initiatives were  
17 particularly important. For example, the governors of Texas and  
18 Florida held conference calls with industry and government  
19 stakeholders where they listened to concerns and rendered prompt  
20 assistance.

21           In Florida specifically, the governor's office waived  
22 certain restrictions for highways, helped ensure that ports  
23 prioritized fuel shipments, coordinated escorts for fuel trucks  
24 and ships, easing the movement of product to the retail fuel  
25 locations.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           At the federal level, disaster response efforts spanned a  
2 number of agencies, which ultimately issued more than 30 waivers  
3 to help deal with fuel supply issues. Of particular importance  
4 to RaceTrac was the waiving of hours-of-service limitations for  
5 drivers providing assistance to affected areas. These waivers  
6 were the difference between getting fuel to our customers in a  
7 reasonably affordable and timely manner and not being able to  
8 supply customers with the fuel they needed.

9           In response to state petitions, federal agencies also eased  
10 restrictions on the type of product that retailers could sell.  
11 For example, EPA temporarily waived certain reformulated gasoline  
12 requirements under the Clean Air Act.

13           Despite the major disruptions to the fuel distribution  
14 system after the hurricanes, the impact on consumers and the  
15 economy was still less than what occurred with Hurricanes Katrina  
16 and Rita in 2005. This is because the government worked with the  
17 private sector to respond appropriately.

18           There are still important lessons to be learned, however.  
19 For instance, there is no good coordinated effort to make sure  
20 that consumers were informed of the status of fuel supplies via  
21 social media. As the hurricanes approached, we believe that much  
22 of the panic about fuel availability caused a significant and  
23 totally unnecessary pull on the available fuel supply. The panic  
24 lessened when information on the fuel supply was shared with the  
25 public. In addition, bottlenecks at ports and fuel terminals

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 was a problem that the government could have done more to  
2 alleviate.

3 Finally, in the hurricanes' aftermath, truck drivers and  
4 other employees found it difficult to get to affected areas  
5 quickly. Anything that can be done to remove hurdles for fuel  
6 transportation would speed up recovery efforts in the wake of  
7 future hurricanes.

8 RaceTrac believes the collaboration between the public and  
9 the private sectors was critical to the successful response  
10 efforts. We are proud to have been able to serve the communities  
11 that we operate in.

12 And I thank you for the opportunity to provide this  
13 testimony.

14 [The prepared statement of Mr. McBrayer follows:]

15  
16 \*\*\*\*\* INSERT 11\*\*\*\*\*

1 Mr. Olson. Thank you, Mr. McBrayer.

2 The Chair now calls upon the honorable Ramon Luis Nieves,  
3 who is now an attorney at law, was a former distinguished member  
4 of the Senate of Puerto Rico.

5 You have 5 minutes for an opening statement, sir.

## 1 STATEMENT OF RAMON LUIS NIEVES

2  
3 Mr. Nieves. Thank you, Chairman Olson, Ranking Member Bobby  
4 Rush, members of the subcommittee.

5 My name is Ramon Luis Nieves. I had the privilege to serve  
6 the people of Puerto Rico as Senator of San Juan and Chairman of  
7 the Committee on Energy. I currently practice law in the state  
8 and federal courts of Puerto Rico.

9 I want to thank the subcommittee for this opportunity to  
10 discuss Puerto Rico's energy challenges. As a resident of San  
11 Juan, I have personally suffered the problems associated with the  
12 lack of electricity for more than 40 days. The currently energy  
13 crisis is destroying our economy and our way of life.

14 Nobody denies the challenges of repairing the collapsed  
15 energy grid of Puerto Rico, but I submit to you that most of the  
16 challenges to turn the lights back on in Puerto Rico are neither  
17 natural nor geographic. They are manmade.

18 The Puerto Rico Electric Power Authority, PREPA, was already  
19 a bankrupt, fragile, and useless entity before Hurricane Maria  
20 made landfall. The Power Authority's grid was obsolete, lacking  
21 adequate maintenance.

22 The recent Whitefish debacle is exhibit A of the governance  
23 issues plaguing PREPA. As we evaluate energy options for Puerto  
24 Rico, we must be particularly alert about disaster contractors  
25 who may try to take advantage and profit off of our people's

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 misery.

2 But I didn't take two flights from San Juan to complain about  
3 PREPA. I come before you with proposals to help us transform  
4 Puerto Rico's energy model.

5 Energy equals life. As most Puerto Ricans sadly understood  
6 after Hurricane Maria, the lack of a strong, resilient, and smart  
7 energy system has the potential of killing people and destroying  
8 the economy. The actual death toll not of Hurricane Maria, but  
9 of Hurricane PREPA has not been properly disclosed by the  
10 government of Puerto Rico.

11 While working hard to turn the lights back on as soon as  
12 possible, policymakers must also think long term. A plan to  
13 transform Puerto Rico's energy model, supported by significant  
14 federal support funding, is the right course of action.

15 Technology and innovation are transforming the energy  
16 industry. Puerto Rico must break free from PREPA's centralized  
17 energy model. The people of Puerto Rico deserve an energy model  
18 whereby more and more customers are able to opt for distributed  
19 generation or go off the grid in their homes and business.

20 Policymakers are agreeing with the idea of a new energy model  
21 based on several regional microgrids. Microgrids for key  
22 government security and health installations, such as hospitals,  
23 will also help recovery efforts after future storms and  
24 hurricanes.

25 The mandate to regulate microgrids is already in our law

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 books. Act No. 133 from last year the last bill that I sponsored  
2 in the Senate, to include microgrids as a mandate. However, a  
3 federal mandate to include microgrids in a new energy model for  
4 Puerto Rico will certainly help.

5 PREPA has also pointed out that the Stafford Act restricts  
6 to rebuild the grid as it was. Perhaps you may be able to change  
7 that by amending federal law.

8 PREPA's old, and now collapsed, grid is not able to deal with  
9 the technical challenges of an energy model that embraces  
10 renewable power. However, as I have said, countless policymakers  
11 agree that just repairing the old, obsolete energy grid of Puerto  
12 Rico will be a colossal waste of taxpayer dollars. PREPA is  
13 broke. So, the federal government is the only entity able to  
14 finance this key project.

15 Let's talk about PREPA's governance. The Whitefish scandal  
16 is a sad example of the shameful and incompetent governance that  
17 characterizes PREPA. PREPA awarded a no-bid \$300 million  
18 contract to an unknown company with just two employees. The  
19 government recently requested PREPA to cancel the contractual  
20 agreement, but 40 days after Hurricane Maria, and hundreds of  
21 deaths later, PREPA did what it should have done from the start,  
22 request the mutual aid offered by private and public electric  
23 companies. But where was PREPA's governing board? Nobody  
24 really knows, but I submit to you that this Whitefish business  
25 is very harmful to Puerto Rico's credibility.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           Very quickly, since my time is almost up, PREPA collapsed  
2 under its \$9 million debt. Congress, the administration, and the  
3 oversight board must create a financial solution for PREPA's debt.  
4 Aggressive restructuring of the debt, combined with new  
5 Brady-type bonds and continued oversight over PREPA, could be a  
6 way to solve this monumental problem.

7           And just to finish up, the most efficient way to transform  
8 the energy model of Puerto Rico is by giving the proper resources  
9 to Puerto Rico's independent energy commission. An independent  
10 and strong regulator is key for our recovery. In order to  
11 guarantee the federal funds to build a new energy grid are properly  
12 used and allocated, I propose that the Revitalization Coordinator  
13 of Puerto Rico under PROMESA and the Puerto Rico Energy Commission  
14 be given sole authority over PREPA. PREPA shall cease to exist  
15 in its present form.

16           Just to wrap up, thank you for the opportunity. The people  
17 of Puerto Rico urgently need to turn their lights back on, but  
18 we also demand the resources to create a new energy model for our  
19 island. Our lives depend on it.

20           Thank you.

21           [The prepared statement of Mr. Nieves follows:]

1 Mr. Olson. Thank you, Senator Luis Nieves.

2 We saved the best for last, ma'am. Our final opening  
3 statement is going to be from Ms. Cathy Kennedy, and she is the  
4 Vice President of the National Nurses United.

5 Ma'am, you have 5 minutes for an opening statement.

6 Welcome.

## 1 STATEMENT OF CATHERINE B. KENNEDY

2  
3 Ms. Catherine Kennedy. Vice Chairman Olson, Ranking Member  
4 Rush, and members of the subcommittee, good afternoon, and thank  
5 you for inviting National Nurses to take part in this hearing.

6 My name is Catherine Kennedy of Carmichael, California, and  
7 I have been a registered nurse for 37 years. I currently serve  
8 as the Vice President of National Nurses United, which is the  
9 largest union of RNs in the country. I submit the testimony today  
10 on NNU's behalf.

11 From October the 4th through the 18th, I served on a voluntary  
12 deployment to Puerto Rico with NNU's Registered Nurse Response  
13 Network to assist with Hurricane Maria's disaster relief. Fifty  
14 nurses deployed with R&R into Puerto Rico among 300 skilled union  
15 members organized by AFL-CIO.

16 NNU nurses very much appreciate your holding this hearing  
17 and providing us the opportunity to share our account of the public  
18 health crisis that we witnessed. NNU's full report on the  
19 conditions of Puerto Rico is attached to my written testimony.

20 The lack of electricity is endangering people's lives and  
21 leading to preventable death and illness. I was the lead RN for  
22 the healthcare teams on the deployment. I helped to organize  
23 nurses into teams and, with a map of the island, we tracked the  
24 public health assessment of each community that we visited,  
25 evaluating whether people had access to food, water, and

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 healthcare, their basic living conditions, and medical needs.  
2 Time and time again, we saw that lack of power exacerbated the  
3 disaster or created new ones.

4 Basic medical services were down in many areas and not fully  
5 functioning in others. An acute public health crisis has  
6 developed. Without electricity, people with chronic illnesses,  
7 such as diabetes and hypertension, cannot refrigerate their  
8 medications. For example, in Loiza, nurses worked with elderly  
9 residents who had to put their insulin in bowls of tepid water,  
10 trying to keep this lifesaving medication cool enough to use.

11 Pharmacies could not refrigerate their medications, either.  
12 They also cannot access computer systems which store prescription  
13 orders. Therefore, patients were scrambling to find doctors to  
14 write new prescriptions, so they can give them to the pharmacies.  
15 But many doctors' offices were closed, partly because the grid  
16 is still down and accessing reliable generators and fuel for them  
17 was nearly impossible.

18 Pharmacies also cannot access insurance information. So,  
19 patients are being asked to pay full price for medications. Most  
20 people don't have cash, and if they had money in the bank, they  
21 can't access it because the ATMs and the banking process systems  
22 are also down.

23 As long as the power grid is down, hospitals cannot function  
24 at full capacity. Generators are prone to failure, and fuel is  
25 hard to access. With generators, hospitals can't perform certain

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 procedures or tests which use a large amount of energy. And at  
2 one hospital we know that they could not perform MRIs as long as  
3 they relied only on generators.

4 Without reliable power, the problems of accessing food and  
5 water are amplified. The simple act of purchasing food and water,  
6 when it is available, is nearly impossible. Stores can't take  
7 credit cards, and ATMs don't work. Bank services that normally  
8 take minutes now take hours.

9 The people of Puerto Rico are unable to refrigerate and cook  
10 their food. They must rely on canned and processed foods, which  
11 are high in sodium. Access to food in rural communities is  
12 especially difficult. As long as there is no power, people will  
13 be reliant on relief organizations to provide food and water for  
14 them.

15 Electricity is also needed to run wastewater treatment  
16 plants and to restore the functioning of water utilities.  
17 Without clean running water, nurses have witnessed the beginnings  
18 of multiple outbreaks of waterborne diseases, including  
19 leptospirosis, an animal-borne bacterial disease that can be  
20 fatal if not treated in time.

21 Then, there are problems accessing FEMA aid. People can't  
22 access FEMA's online notices and aid application. For those that  
23 are able to apply for aid, they are told that necessary followup  
24 communication will be sent either by text or email. People don't  
25 have power right now. They are not going to receive any followup

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1 for their FEMA applications.

2 NNU urges Congress to use its oversight and appropriation  
3 authority to ensure that FEMA and other U.S. agencies respond to  
4 this crisis effectively. It is unacceptable that citizens of the  
5 richest country on earth have been denied necessary humanitarian  
6 aid and left to die. With a growing climate crisis, relief to  
7 Puerto Rico must come in the form of responsible measures that  
8 can build a sustainable energy future.

9 Thank you again for giving NNU the time to share the stories  
10 of the people and places in Puerto Rico that we cannot and must  
11 not forget. Thank you.

12 [The prepared statement of Ms. Catherine Kennedy follows:]

13  
14 \*\*\*\*\* INSERT 13\*\*\*\*\*

1 Mr. Olson. Thank you, Mrs. Kennedy.

2 And now is the fun time, questions from the members. And  
3 the Chair will yield to himself for 5 minutes of questions.

4 My first questions are for you, Mr. Thompson. First of all,  
5 I have to say congratulations. I mean, I was there for Hurricane  
6 Ike, Tropical Storm Allison. I was there for Hurricane Harvey.  
7 Most of our capacity was in that storm. You guys came roaring  
8 back. So, congratulations for getting that turned around so  
9 quickly.

10 I have talked to a lot of people. You guys have gotten much  
11 better preparing for hurricanes or sort of natural disaster.  
12 Yes, we are going to take a hit; we know it. I have heard like  
13 with Katrina, Rita, and Ike, you all learned how to not fully shut  
14 down our refinery, but keep it warm, so to speak, not the complete  
15 shutdown, but keep it going where it is that risk of some sort  
16 of breach. But, once the storm clears, get that thing up like  
17 that.

18 So, I just want you to talk about how you prepare a refinery  
19 that is directly in the path of a storm like Harvey to make sure  
20 to get that thing back online as quickly as possible.

21 Mr. Thompson. Well, thank you for the question, and I  
22 address some of this in my opening remarks. Most of this, of our  
23 ability to weather the storms, one was our credible workforce.  
24 We literally had thousands of people that were riding out these  
25 facilities. When their own families and houses were in peril,

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 they were helping keeping our facilities literally above water  
2 and ready to go.

3 Also, lots of preparation. We have been working on storm  
4 for years, working with the National Petroleum Council, working  
5 with DOE and DHS. This was not something that we prepared for  
6 just a few weeks ago.

7 We took all the lessons learned from prior storms and we put  
8 them in the action. We hardened our infrastructure. We elevated  
9 what we could elevate. We have much better storm-tracking  
10 capabilities now. So, we could identify exactly where the storm  
11 was going and identify when we had to bring the systems down.

12 Safety is the No. 1 responsibility. So, our facilities will  
13 come down when safety demands it. And so, for those facilities  
14 where they realized that they weren't going to be hit as hard,  
15 they could remain warm and ready to go. Some of the facilities,  
16 indeed, had to come all the way down.

17 So, I would just end by saying a lot of hard work, a lot of  
18 dedication. And again, we can't applaud our employees enough.

19 Mr. Olson. And lessons learned, which I know it just goes  
20 with the territory. You will have some leaks, some chemical  
21 leaks, you know, whatever. For example, we have these big tanks  
22 that have floating tops. And the water got so high, almost 5 feet  
23 of rain overcame the capability, and you had some small leaks.

24 So, my question is, what are you all doing to prevent and  
25 respond to these spills before they happen? Because I know it

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 is amazing what happened. I mean, it was such a stellar  
2 performance. But how do you make it even better going forward?

3 Mr. Thompson. Well, I can assure that every company, those  
4 impacted and those that even weren't directly impacted are  
5 assessing how we responded to the storm, what went well, what  
6 didn't go well. We, as a trade association, bring our members  
7 together. We share information. And we will work to improve.  
8 Very storm, we learn from the prior one to get better.

9 Mr. Olson. Thank you.

10 A question for you, Mr. McBrayer. I mean, I was driving  
11 around pretty much for a week after Harvey hit and you could find  
12 gasoline. Some shops were shut down. My question is, was that  
13 because of power, because of lack of supply, lack of the gasoline,  
14 or lack of the employees being able to get to work because of all  
15 the floods? So, what was going on there? Because, again, you  
16 could find it, but some stations weren't up and running and, as  
17 you mentioned, there was some price gouging because of all sorts  
18 of rushes because people are panicking that there will be no  
19 gasoline.

20 Mr. McBrayer. All of the things that you mentioned, Mr. Vice  
21 Chairman, are correct. Some of it is due to the fact that we rely  
22 upon the employees who are living in the affected area. And like  
23 any good employer, we are more concerned about their life at home  
24 and being sure that they are prepared to meet the needs of their  
25 family before they return to work.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           We do have some problems with the electrical supply.  
2           Getting generators into our stores, specifically, was quite  
3           challenging in the Houston area because of the amount of flooding  
4           in the roadways. There are some stores that just choose not to  
5           buy at the costs that tend to go up during these disasters.

6           But most everyone is working hard because in our business  
7           we build 50-year assets. We are there for a long time. And so,  
8           our long-term mentality is to provide what our guests, our  
9           consumers, need, and to work hard to do that.

10          It is a site-by-site lissue as to what the problems are and  
11          what we may need to do. We have stores in the south Houston area  
12          with some water in tanks. We have had stores that were completely  
13          flooded out that are still yet to reopen. But you have to assess  
14          your assets one at a time and do things you can quickly in order  
15          to bring them back online.

16          Mr. Olson. One further question, Mr. Fanning. You brought  
17          up UAVs, and that is a big deal, hard back home. A town called  
18          Missouri City had some levies, not so much oil production, but  
19          levies that may be breaching. They were fine, the UAVs, they  
20          could see it and, then, they were grounded. So, how about the  
21          role of UAVs in these disasters for oil and all the operations  
22          with the petrochemical industry? Because those things are  
23          working and, for some reason, they were shut down because there  
24          was some kind of danger. And that was just not right to do because  
25          of that breach; they may have prevented a breach because they saw

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 it with the UAVs. So, any idea about oil and gas operations,  
2 refining, storage, whatever, that UAVs could help out?

3 Mr. Fanning. Yes. Well, we don't impact oil and gas  
4 particularly. But, in response to any storm, there should be a  
5 comprehensive plan that is undertaken, really driven by the local  
6 authorities.

7 I was listening to your prior panel. Very interesting, in  
8 that every utility works with -- for example, in Georgia, they  
9 would work not only with the federal agency FEMA, but with GEMA.  
10 Within that context, all critical infrastructure is evaluated  
11 with respect to the approaching threat. And therefore, we  
12 develop a set of priorities and, essentially, a response regime  
13 as to how to provide the best benefit going forward.

14 I can't speak to Missouri or whatever the impact is there,  
15 but I would assume that they have taken those things into account.

16 Mr. Olson. Thank you. I am aware of my time.

17 The Chair now recognizes the gentleman from Illinois, the  
18 ranking member, Mr. Rush, for 5 minutes.

19 Mr. Rush. I want to thank you, Mr. Chairman.

20 Ms. Kennedy, your testimony has been very, very amazing  
21 testimony. I am amazed at the breadth of the tragedies that are  
22 occurring, even as we speak, in Puerto Rico. And I am amazed at the  
23 lack of proper attention by those in our government in determining  
24 their response to this American tragedy in Puerto Rico.

25 There are some who are disputing the official death toll.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Some say that, oh, 51 casualties due to the hurricane. But, yet,  
2 the Puerto Rican Department of Public Safety confirmed that over  
3 900 bodies have been authorized for cremation since Hurricane  
4 Maria tore through their island on September the 20th. And that  
5 900 figure includes deaths related to lack of oxygen and other  
6 fatalities that appear to be due to the power outage. Yet, some  
7 say that those fatalities should just be considered natural  
8 deaths.

9 Do you concur with this definition from your experiences?  
10 You have spent time there. Do you believe that the death toll  
11 from Hurricane Maria is actually 51 or is it closer to 900, or  
12 is it somewhere in between?

13 Ms. Catherine Kennedy. Well, thank you for the question.

14 We were there from October the 4th through the 18th. And  
15 as I said in my testimony, what the nurses saw was that, when you  
16 get outside of San Juan, that they were pretty much cut off from  
17 electricity, from communication, from anything. So, when you ask  
18 me what was the death toll, do I believe whether it is 51 versus  
19 911, or somewhere in between, personally, I think it is more of  
20 the higher.

21 What we saw was people were desperate. We were considered  
22 almost the first ones that they even saw as it relates to food  
23 or water, or any kind of communication. And through word of  
24 mouth, they did say that the neighbor passed, whether it was  
25 through leptospirosis or natural causes -- you mentioned the lack

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 of electricity and without oxygen. So, yes, I think it is rather  
2 on the high side.

3 Mr. Rush. Mr. Nieves, do you have any further insight into  
4 the actual number of fatalities and the reason for those  
5 fatalities?

6 Mr. Nieves. Yes. Basically, I really agree with Ms.  
7 Kennedy. The official death toll of 59 up until now is very  
8 superficial and misleading. By personal experience, I have  
9 talked with dozens of family, friends, that have told me, "Oh,  
10 my grandmother died. She passed because she didn't have  
11 electricity in her nursing home." A lot of elderly people that  
12 do not have electricity are simply dying.

13 And so, how can you relate that to Hurricane Maria? It is  
14 very difficult because it didn't happen that day. But the death  
15 toll is, in my view, in the hundreds.

16 Mr. Rush. So, even today, as we sit here in this committee  
17 room, there are people who are still dying in Puerto Rico simply  
18 because they have no electricity, even today?

19 Mr. Nieves. Yes. As I said in my testimony, people are  
20 dying today not because of Hurricane Maria, but because of  
21 Hurricane PREPA, because they don't have electricity in their  
22 homes and care centers.

23 Ms. Catherine Kennedy. I would agree. Without  
24 electricity, without power, you know, there are stories where  
25 patients actually go to San Juan when the electricity is up, and

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 they take their nebulizers and plug them in, so that they can do  
2 the breathing treatments. Or they may sit in clinics where they  
3 have access to oxygen and use the oxygen there throughout the day,  
4 and then, they go home where there is no electricity and they are  
5 without oxygen, without anything.

6 Mr. Rush. Thank you, Mr. Chairman. I yield back.

7 Mr. Olson. The gentleman yields back.

8 The Chair now calls upon the gentleman from Illinois, Mr.  
9 Shimkus, for 5 minutes.

10 Mr. Shimkus. Thank you, Mr. Chairman.

11 It is great to have you here. I want to direct some of my  
12 questions to Mr. Fanning.

13 Mr. Fanning, if the electricity went out in Atlanta, Georgia,  
14 who would get called?

15 Mr. Fanning. Initially, Paul Bowers, President of Georgia  
16 Power Company, but that is a pretty clear deal.

17 You know what is interesting in these storms, we have,  
18 essentially, people that run the storm activity. They are fully  
19 empowered to work with whatever state, local, federal government,  
20 to get the lights on as fast as we can. They have a clear sense  
21 of priority and they get the job done.

22 Mr. Shimkus. Again, Puerto Rico is an island. It is very  
23 difficult, and I kind of wish the administration would have  
24 deployed the 82nd Airborne and just had a parachute jump into a  
25 lot of communities that don't have access. At least there would

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 be a meal ration. And the military has even solar packs that they  
2 take in Afghanistan. If there was one thing I wish they would  
3 have done more than anything, it is really deployed.

4 But you also heard in the first panel that the fact that there  
5 was no request for help until five weeks later. That is not  
6 normal. I mean, you represent the Electricity Subsector  
7 Coordinating Council.

8 Mr. Fanning. That is right.

9 Mr. Shimkus. Isn't that something that you all do as part  
10 of that?

11 Mr. Fanning. Absolutely. In fact, I would argue,  
12 especially this year -- the Electricity Subsector Coordinating  
13 Council was originally formed to focus on cyber and physical  
14 security. We have added to that, given the success we have  
15 demonstrated on those issues, this notion of storm response.

16 Following Sandy, the electric utility industry reorganized  
17 what we call regional mutual assistance groups. And so now, under  
18 the kind of structure of the ESCC, we bring together, really for  
19 the first time, an enhanced collaboration, not only of  
20 investor-owned utility responses, but also  
21 collaboration/coordination with municipal utilities,  
22 cooperative utilities.

23 We offer that up and we participate in a series of restoration  
24 activities, federal government, local, and with each other. And  
25 we do that, also, interdependent with the other kind of industries

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 that you all were talking about in the last segment. And that  
2 is telecom, so important; water and sewer; health care.

3 Believe it or not, we go beyond the notion of offering  
4 assistance just for the restoration of electrons. In Houston,  
5 particularly, my company got called on for two things that had  
6 nothing to do with electricity.

7 One was for the humanitarian rescue effort. Within 20  
8 minutes of a phone call, we sent forward pilots and drones to help  
9 identify where survivors and other people may be.

10 Secondly, through Alabama Power, we delivered machinery that  
11 was able to operate in very high water conditions that were used  
12 to help rescue people.

13 Mr. Shimkus. Thank you.

14 And PREPA, or the Puerto Rican Electric Power Authority, they  
15 are not involved in this group, are they?

16 Mr. Fanning. So, PREPA works under the aegis of the American  
17 Public Power Association, which is, essentially, a municipal  
18 organization. We offered help, but PREPA, the State of Puerto  
19 Rico, for whatever reason, elected to pursue a different path,  
20 not pursue the mutual assistance rubric and really go through  
21 bilateral --

22 Mr. Shimkus. Yes, and let me go to the elected  
23 representative, Mr. Nieves. When we look back now on lessons  
24 learned and how we want to move forward, would you agree that we  
25 probably should look at ways in which the whole community can be

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 helpful and develop these memorandums of understanding where we  
2 can get joint use and quick response? That would be probably a  
3 pretty good lesson learned in this?

4 Mr. Nieves. Well, the thing is, the fact is that the  
5 American Public Power Association, and I understand that at least  
6 the Electric Institute offered since day one mutual assistance  
7 to PREPA, but PREPA pursued another way. So, it is not a lack  
8 of an agreement, but it was a lack of will from PREPA's part. And  
9 then, we have the Whitefish situation.

10 Mr. Shimkus. Yes, yes. And I am sure we are going to have  
11 time to continue to look at that. But, believing your testimony,  
12 which I do, that is, I would call that criminal negligence. And  
13 I am sorry for that.

14 My time has expired, Mr. Chairman. I yield back.

15 Mr. Olson. The gentleman yields back.

16 The Chair now calls upon the gentlewoman from Florida 14,  
17 Ms. Castor, for 5 minutes.

18 Ms. Castor. Thank you, Mr. Chairman.

19 Thank you all very much for being here.

20 The more we hear directly from folks like you that are in  
21 the U.S. Virgin Islands and Puerto Rica, the more disturbing it  
22 gets. I think you can sense the outrage building from this  
23 committee over the Puerto Rico Electric Power Authority.

24 Mr. Nieves, are you surprised that PREPA did not respond to  
25 this committee and, in essence, refused to appear here?

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Mr. Nieves. I am sad to say that I am not surprised. When  
2 I used to Chair the Senate's Energy Committee, one of the things  
3 that we found is their total lack of transparency. So, to me,  
4 I assume this is a lack of respect for this committee that PREPA  
5 is not here on this group.

6 Ms. Castor. And were you surprised to hear Mr. Alexander,  
7 who is the lead for the U.S. Army Corps of Engineers in repairing  
8 the grid in Puerto Rico, were you surprised to learn that he hasn't  
9 even been able to have a conversation with PREPA

10 Mr. Nieves. Sadly, I am not surprised.

11 Ms. Castor. So, how do we justify taxpayer dollars now going  
12 to repair a grid in Puerto Rico, trying to work with PREPA after  
13 they refused to interact with the committee? They are not working  
14 with the Army Corps of Engineers. They are wasting taxpayer money  
15 through this Whitefish contract that has outraged so many people.  
16 And yet, the need is so great on the island. How do you recommend  
17 that we move forward? We are going to have to address the PREPA  
18 situation in law as soon as possible, I would assume.

19 Mr. Nieves. Yes. First of all, we have to really  
20 understand and consider at the end of the day, given PREPA's  
21 governance problems, we need to think that people are dying. Our  
22 economy is dying. So, how do we work around that, or PREPA's lack  
23 of governance and transparency?

24 My suggestion, and that I did in my testimony, is that since  
25 Congress already passed the PROMESA act, and the oversight board

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 named a Revitalization Coordinator that has been appointed to take  
2 over PREPA, that Congress finds a way, a mandate, a specific  
3 mandate, that federal taxpayer money to create a new energy grid  
4 be under the supervision of the Revitalization Coordinator of the  
5 board and the Puerto Rico Energy Commission, which is an  
6 independent, non-political, nonpartisan, and highly technical  
7 body. So, you can bypass PREPA and the government of Puerto Rico.  
8 So, that could be a way to get around it.

9 Ms. Castor. And this has to be, we have to have a sense of  
10 urgency to do this, because they are talking about the next  
11 emergency bill maybe will be in December, hopefully. I mean,  
12 there is a lot of things on the agenda for Congress in December.  
13 But time is of the essence here.

14 Mr. Nieves. Yes.

15 Ms. Castor. And, Colleagues, we simply have to find a way  
16 to at least begin to plan to build in some resiliency, get the  
17 power on, but begin to lay the groundwork for a modern electric  
18 grid, and address the ineptitude of the Puerto Rico Electric Power  
19 Authority. Lives hang in the balance.

20 We have the experts at our fingertips. We have the  
21 technology to do this. Does Congress have the capacity to act  
22 with a sense of urgency, knowing how our fellow citizens are  
23 suffering there? So, that is a challenge for us.

24 So, I thank you all very much for being here.

25 And I yield back my time.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Mr. Olson. The gentlelady yields back.

2 The Chair now calls upon the gentleman from Mississippi,  
3 Gregg Harper, for 5 minutes.

4 Mr. Harper. Thank you, Mr. Chairman. Congratulations to  
5 the Astros.

6 Mr. Olson. Thank you.

7 Mr. Harper. And I know it was a great series.

8 I want to thank each of you for being here. This is still  
9 something that just is stunning, the hurricanes we have had to  
10 deal with this season. And certainly what has happened in Puerto  
11 Rico has concerned us all.

12 So, Mr. Fanning, I know you mentioned that it is more than  
13 just power or restoration of power. It is also telecom, water  
14 and sewer issues. Can you talk for a moment and tell us how  
15 utilities use their communications network to recovery and  
16 respond from hurricanes and other weather-related events, and how  
17 reliable do those communications networks need to be?

18 Mr. Fanning. Yes. Thank you, Congressman, and thank you  
19 for your service to the great state of Mississippi.

20 Mr. Harper. Thank you.

21 Mr. Fanning. The best example of that is Katrina, as you  
22 well know. I think Katrina and the national story gets told  
23 around New Orleans in the breaching of the dam. The truth is,  
24 in Mississippi, when Katrina came through, every light was out  
25 around Mississippi Power.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           And when you went in to try to restore that activity, the  
2 streets were unrecognizable. You couldn't even use,  
3 essentially, GPS to find your way around. All of the telecom was  
4 out as well.

5           We have to have an interconnected effort between telecom and  
6 electricity in order to most efficiently respond to these sorts  
7 of disasters. Southern Company, as a matter of its own resilient  
8 strategy, has our own dedicated telecom company called Souther  
9 Linc, in which we can bring in mobile cells on wheels, towers  
10 essentially, to set those things up.

11           As I am working within the context of the ESCC as it relates  
12 to Puerto Rico, early on -- and this is where the ESCC was not  
13 asked to help in a mutual assistance effort -- but, still, we were  
14 working with different parts of the economy to try to bring help  
15 to that island.

16           I called personally John Donovan. He is roughly the No. 2  
17 guy at AT&T, as I understand it. And also, at -- hold on -- at  
18 Verizon, Lowell McAdam, who is the CEO there, to link together  
19 our efforts in bringing help down there. And we assured each  
20 other that, between telecom and electricity, we would provide  
21 every level of support, whether it was even asked for or not, to  
22 try to get that situation rectified.

23           Congressman, it is critical. If we are going to communicate  
24 with people in the field, if we are going to have people in the  
25 field without telecom, we need some way to kind of communicate

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 to get the stuff back on. It is absolutely critical.

2 Mr. Harper. So, you provided assistance in that area, even  
3 though it was not requested by PREPA?

4 Mr. Fanning. That is right. And in fact, I will give great  
5 kudos to the folks at FEMA, whether it is Brock Long who has done  
6 a heck of a job. I was on the floor of FEMA during a weekend during  
7 this situation. Another guy that works in DHS, Chris Krebs; in  
8 the White House, Tom Bossert, all of these people have been  
9 champions in trying to aid the situation without a whole lot of  
10 encouragement.

11 Mr. Harper. Got you.

12 You know, Southern Company is right in the middle of what  
13 I guess we would call the hurricane belt. But Southern Company  
14 has a long and good track record of restoration after a hurricane,  
15 not only in your home service area, but helping your neighbors,  
16 certainly through the ESCC and others.

17 Have you seen changes based on lessons after Katrina that  
18 you are using today to improve that?

19 Mr. Fanning. Oh, sure. We have this mantra I had in my  
20 opening statement. We want to be today better than yesterday;  
21 tomorrow better than today. And no matter how good we think we  
22 are, we can always be better, me included.

23 And we are accountable for always improving. When you think  
24 about some of the testimony, life-and-death matters that are at  
25 stake here, you know, it isn't just about electrons; it is about

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 restoring hope to communities and people's ways of life.

2 And so, we always work hard to think about what we can do  
3 better. I think the latest iteration, whether it is Harvey,  
4 whether it is Irma, the ESCC has demonstrated a much better  
5 capability of working across not only investor-owned utilities,  
6 munis, and coops, but also across cross-sector industries,  
7 telecom, finance --

8 Mr. Harper. Right.

9 Mr. Fanning. -- water, et cetera. And so, those are  
10 particularly good things.

11 The other thing is this whole notion -- and we have heard  
12 a lot about new technology being brought to bear. Good heavens,  
13 we deployed that in terms of resiliency as a strategic objective  
14 of America, whether it is cybersecurity, protection against  
15 terrorists from a physical standpoint, but also against natural  
16 disasters.

17 Mr. Harper. Fine. Thank you, Mr. Fanning.

18 My time has expired. I yield back, Mr. Chairman.

19 Mr. Olson. The gentleman yields back.

20 The Chair now calls upon the gentleman who made sure that  
21 Texans signed Justin Verlander to get us through the playoffs  
22 here, Gene Green, Texas 29.

23 [Laughter.]

24 Mr. Green. I wish I could claim, except going to a couple  
25 of the games. But thank you, Mr. Chairman.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           Mr. Thompson, you talk about how quickly refined production  
2 was back online after Harvey. And I would like to commend the  
3 job industry did in our district, because in east Harris County  
4 we have five refineries. I sat down and met with Lyondell  
5 refinery and, also, with Shell. And a lot of folks don't  
6 understand you just can't turn switches off and on and get them  
7 back up. But now the price of gas is going down because all those  
8 refineries are back up. I know in our area -- and I assume over  
9 in Beaumont-Port Arthur also -- I know a lot of my constituents  
10 worked around the clock to get that back up.

11           One of the concerns I had, though, was the issue with the  
12 tanks. In east Harris County, we have the tanks that are -- we  
13 keep building them because it is either holding crude or product  
14 or whatever. The engineering of them now is a floating roof.  
15 Because of the amount of water that hit the top of that, it actually  
16 turned that top over, and water went into whatever product was  
17 there. It could have been crude oil; it could have been refined  
18 products, and emissions from that, but also overflowing. Because  
19 when you get 52 inches of rain anywhere, you are going to have  
20 a problem.

21           Has the industry looked at what we are going to do? I know,  
22 talking with the two companies, they said, we are going to have  
23 to look at it because how do we plan for 52 inches of rain. But  
24 see if engineering-wise there is a way we don't repeat that problem  
25 if we have another -- well, not if; it is when we are going to

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

(202) 234-4433

[www.nealrgross.com](http://www.nealrgross.com)

1 have another storm because on the Texas Gulf Coast -- I am a native  
2 Houstonian; we have lived through them, and we will get through  
3 this, too, but it is not pretty. But we need to learn from our  
4 mistakes if we have another 52-inch rain in those plants.

5 Has there been talk about how, across from API -- because,  
6 like I said, just talking with two companies, they said they had  
7 to look at it and see what is going on.

8 Mr. Thompson. Thank you for the remarks.

9 Yes, our industry, as I have said open remarks, we fared  
10 fairly well. We proved to be resilient. We weren't perfect by  
11 any stretch of the imagination. We were better prepared than we  
12 were in prior storms. We have installed a lot of floating roofs,  
13 which you know are better for the environment. In the normal  
14 states, emissions are much lower.

15 But we weren't prepared for 60 inches of rain at times. And  
16 so, some tanks did have some failures. But the key is that was  
17 the exception and not the rule --

18 Mr. Green. Yes. Mr. Thompson. -- for sure. And I can  
19 assure you that this is already a No. 1 topic of conversation,  
20 about to prevent this going forward, and there will be lots of  
21 discussion. And I am sure there will be engineering to make sure  
22 these problems don't happen going forward, to the best we can.

23 Mr. Green. Okay. Can you talk a little bit about the  
24 difference in how quickly the refining sector came back up online,  
25 and the difficulty, how long it took for the petrochemical sector

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 in Houston?

2 Mr. Thompson. Yes. Well, certainly the refining industry  
3 came back online a little bit more quickly. A lot of that was  
4 from preparation. The petrochemical side, we knocked out, as you  
5 know, 60 percent of the national capacity, 80 percent in the Gulf.  
6 About 75 percent of that capacity has returned to the industry.  
7 Some of our facilities, they were under lots of water and it has  
8 taken a lot of time to get those facilities back up. Repairs have  
9 had to be made, and that just takes time. But we are well on our  
10 way. We think we have turned the corner and, hopefully, we will  
11 be back up to full capacity soon.

12 Mr. Green. And I also know that you can tell that at the  
13 price at the pump because the prices went up 25-30 cents a gallon,  
14 but now it is back down, maybe not in Washington, but at least  
15 in southeast Texas it has gone back down to maybe a little higher  
16 than it was, but still it is not \$2.49; it is \$2.19 that you can  
17 get on the side of the road now.

18 Mr. Thompson. And certainly we are getting back closer to  
19 pre-hurricane levels, but one thing I will point out is, since  
20 that time, the price of crude oil is certainly higher.

21 Mr. Green. Yes.

22 Mr. Thompson. And so, some of that is being reflected at  
23 the pump as well.

24 Mr. Green. Yes.

25 I yield back, Mr. Chairman. Thank you.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Mr. Olson. The gentleman yields back.

2 The chairman now calls upon the House's best birdwatcher,  
3 the man from the Commonwealth of West Virginia --

4 Mr. Griffith. Virginia.

5 Mr. Olson. I am sorry. Virginia. I am confused.

6 [Laughter.]

7 Mr. Griffith. You have been in the chair a long time.

8 [Laughter.]

9 I appreciate it.

10 Mr. Olson. Five minutes, my friend.

11 Mr. Griffith. Thank you very much.

12 Mr. Fanning, Mr. Harper touched on this a minute or two ago,  
13 but making sure we have lines of communication up. The National  
14 Infrastructure Advisory Council, noting this absolute  
15 criticality that communications play in grid resilience,  
16 suggested that electric utilities may need some dedicated  
17 spectrum space. What do you think?

18 Mr. Fanning. Well, listen, there is a number of solutions  
19 that go to that very important problem. Even to be provocative,  
20 in the circumstance of a national emergency, should you have  
21 dedicated internet access? There is a lot of things that you need  
22 to clear the way for.

23 Let me just give great kudos. So many people today I think  
24 lose faith in government and the institution and the people that  
25 run it, and all that. I can say without equivocation that, in

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 response to these events, whether it is in the White House with  
2 Tom Bossert, whether it is Energy Secretary Perry, one of the  
3 things that we can do is to work with these folks. And these folks  
4 can clear the way to get the work done.

5 So often, I think the question goes to who is in charge. You  
6 know who really knows how to get stuff done are the line crews  
7 and the supervisors and the people that have the boots on the  
8 ground to get this done. And when there are barriers, what we  
9 have got to do is work in this effective public/private  
10 partnership to get whatever barriers exist cleared away. The  
11 government in this case has been fabulous during Harvey and Irma  
12 particularly.

13 Mr. Griffith. I appreciate that, and thank you for your  
14 answer.

15 Mr. Rhymer, I was very pleased, as I was listening to your  
16 testimony, to hear you talk about microgrids and what you all are  
17 planning on doing. I particularly like the way you described how  
18 you are going to have them interact with the full system, and then,  
19 if they need to be standalone -- I thought that was very good and  
20 I appreciate it. I hope you all success in that, and I look  
21 forward to seeing it at some point when it is working, because  
22 I think that is helpful. Not just in the islands, but in mountains  
23 and other regions of the United States those kinds of concepts  
24 can be very, very helpful. So, thank you for that.

25 Mr. Rhymer. Thank you.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           Mr. Griffith. Mr. Nieves -- did I say that close to right?  
2 Thanks.

3           I appreciated your stark comments. It seems that there have  
4 been a lot of problems with the electric utility in Puerto Rico  
5 for some time, based on your comments. I am just wondering, you  
6 know, the federal government is going to be asked to come in there  
7 and spend a lot of money. I understand that and think that is  
8 right. But, if we do so, are you willing -- do you think that  
9 the government there, particularly the electric utility, is going  
10 to be willing to introduce some of these novel concepts like  
11 microgrids, and working on ways to use Puerto Rico as a land of  
12 experiments where we can try different things? They won't all  
13 necessarily work, but things that we can do to try to make the  
14 grid better long time, and try out some of these new ideas that  
15 are out there that have been talked about for years, but we have  
16 never had an opportunity.

17           And for all the tragedy that is taking place in Puerto Rico,  
18 for which I am very sorry and worry about figuring out what we  
19 can do, we may have the opportunity to do something better. Do  
20 you think that the utility company would be willing to embrace  
21 some of that?

22           Mr. Nieves. Well, my proposal during testimony is that, if  
23 the federal government is going to step up and allocate  
24 considerable resources to not just repair the old grid, but to  
25 create a new grid, you cannot do that alone. You have to also

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 establish a specific mandate in the law saying we are  
2 appropriating this "X" amount of dollars to build a new grid for  
3 Puerto Rico, but with these specifications.

4 And I respectfully submit that macrogrids could work;  
5 regional microgrids for Puerto Rico could really work to create  
6 a strong, resilient system. That might as well be ordered by  
7 federal law.

8 Under Puerto Rico local law that I worked on last year when  
9 I was a Senator, we authorized microgrids. And the Puerto Rico  
10 Energy Commission is right now working on an expedited regulation  
11 to put them in place. But I really submit that "X" amount of  
12 dollars appropriated by our federal government have to be with  
13 a specific federal mandate.

14 Mr. Griffith. And I appreciate that and would agree that  
15 we are going to have to do some different things there. One of  
16 the things that I think might help is if we have the utility  
17 accountable to shareholders. I don't know how you would spin that  
18 off with the assets they have. But I noticed from your comments  
19 that one of the problems was that you had, while it was a  
20 semi-regulated monopoly, it was a nonprofit. And it is amazing,  
21 when you are trying to figure out ways to make yourself more  
22 efficient, you come across ways to make at least a little bit of  
23 profit, even if it is not required to be much profit. Anyway,  
24 it is a thought to think about, and I hoped that you would consider  
25 that as well.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           And my time is way over. So, I have to yield back. Thank  
2 you.

3           Mr. Nieves. Thank you.

4           Mr. Olson. The gentleman from the Commonwealth of Virginia  
5 yields back.

6           The Chair now calls upon the gentleman from Amsterdam, New  
7 York, Mr. Tonko, for 5 minutes.

8           [Laughter.]

9           Mr. Tonko. Thank you, Mr. Chair.

10          Mr. Rhymer, your testimony mentioned that the Water & Power  
11 Authority had used FEMA hazardous litigation grants to bury  
12 infrastructure underground, making it more resilient. When did  
13 you receive those grants?

14          Mr. Rhymer. We received those grants approximately in  
15 2010-2011.

16          Mr. Tonko. Okay.

17          Mr. Rhymer. And we have underground a portion of St. Thomas  
18 and a portion of St. Croix. We are currently seeking additional  
19 hazardous litigation grants currently to underground St. John in  
20 the Cruz Bay area and additional parts of St. Thomas and St. Croix.

21          Mr. Tonko. Okay. And is there any other FEMA money you are  
22 asking to secure beyond that burying of cable? Anything with your  
23 microgrids? Are you requesting --

24          Mr. Rhymer. Well, we are seeking to get litigation grants  
25 for the microgrid stuff, renewable energy stuff that actually adds

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 to the microgrid. We are also looking to do some hardening of  
2 the system in terms of administration, in terms of the buildings.  
3 Like the line department building is completely destroyed. So,  
4 basically, we need to have that building be resilient.

5 Mr. Tonko. Thank you.

6 New York State and the utilities there benefitted greatly  
7 from mutual assistance in the aftermath of Superstorm Sandy. And  
8 now, it is our turn to be called upon. It is your turn to be called  
9 upon in making things better.

10 Mr. Fanning, do you believe the utility industry's mutual  
11 assistance efforts work well?

12 Mr. Fanning. Oh, they are outstanding.

13 Mr. Tonko. I know islands present unique challenges to  
14 mobilizing workers and equipment, but can you think of specific  
15 reasons why mutual assistance would be resisted?

16 Mr. Fanning. No.

17 Mr. Tonko. Okay. Mr. Nieves, you testified that Puerto  
18 Rico's grid had limitations certainly in the amount of renewable  
19 resources that could be integrated into its energy mix. What were  
20 the reasons for that?

21 Mr. Nieves. Yes. According to a 2014 report that PREPA  
22 received, the grid, as it stood before Maria, could only integrate  
23 up to 580 megawatts of renewable power. Renewable power has  
24 certain technical issues that the grid that we had could not really  
25 tolerate without jeopardizing the system.

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Mr. Tonko. Is it a matter of better interconnect devices?  
2 There is technology already shelf-ready, I would believe, that  
3 might be able to help --

4 Mr. Nieves. That is correct.

5 Mr. Tonko. -- your situation?

6 Mr. Nieves. Well, PREPA's grid was not a smart grid. It  
7 was not a grid that could really accommodate a system whereby  
8 customers are also generating power, renewable power, so they are  
9 not just passive customers of our energy model. So, according  
10 to that report from Siemens, PREPA's grid only can tolerate up  
11 to that amount of renewable power, which is really unacceptable,  
12 and a really small amount.

13 Mr. Tonko. And, Ms. Kennedy, thank you for making it so  
14 clear that Puerto Ricans are still dealing with a life-and-death  
15 situation. Can you further explain the health impacts you have  
16 seen due to a lack of safe water in Puerto Rico?

17 Ms. Catherine Kennedy. Sure. Like I said, we were there  
18 for about two weeks. One of the things that the nurses had to  
19 go out and do was really within the community to take a look at  
20 what kind of resources were available. Time and time again, it  
21 was the lack of clean running water.

22 One of the things that the nurses saw was that people were  
23 very desperate. So, they were actually drinking from river  
24 water. Water that came down they would save from their roofs.  
25 As you know, with hurricane, you have rodents and, of course,

**NEAL R. GROSS**

1 bacteria. So, the prospect of leptospirosis was imminent. And  
2 clearly, there were people that were infected, but, again, if  
3 treated properly, then, I mean, it wouldn't be life threatening.  
4 But these were things that we saw for the last two weeks.

5 Mr. Tonko. Right. I have also seen some photos shared with  
6 me by family members in my district. They cause grave concern.

7 I believe -- and I think Ms. Kennedy would agree -- that we  
8 need to have a serious discussion about waiving cost-sharing  
9 requirements, especially for critical public health  
10 infrastructure such as our water systems. It is a public health  
11 and public safety situation.

12 I would also express that Puerto Rico can learn a great deal  
13 from New York's REV Initiative. It was in response to the  
14 Superstorm Sandy situation. And that state, our state, my home  
15 state has worked to understand changes in the traditional utility  
16 business model and how to plan for a more decentralized grid.

17 My concern is that, if we build back to this failed system  
18 that you cite, it is a very troublesome investment made by any  
19 level of government and the private sector, and we need to do  
20 better than that and encourage smart, flexible, and reliable grid  
21 for a cleaner and stronger energy future.

22 And with that, I yield back. And congratulations on last  
23 night.

24 Mr. Olson. Thank you, thank you, thank you.

25 The gentleman yields back.

**NEAL R. GROSS**

1           The Chair now calls upon the gentleman from our neighbor to  
2 the north, Oklahoma, Mr. Mullin, for 5 minutes.

3           Mr. Mullin. Chairman, you are in almost a giddy form today.  
4 I wonder why.

5           [Laughter.]

6           Mr. Olson. Guilty as charged.

7           Mr. Mullin. The best thing is the third baseman for the  
8 Dodgers, I guess, can shave and cut his hair now, right?

9           Hey, I appreciate you guys coming up here and informing  
10 Members of Congress. It is very important for us to have a working  
11 relationship in a situation like this.

12           It has been a long day, and I appreciate your all's patience.  
13 But I feel like we are going to continue to learn from these  
14 lessons. What we don't want to do is get in the habit of repeating  
15 them.

16           Mr. Fanning, if you don't mind, I would like to start with  
17 you. The physical work of the restoration I know falls mainly  
18 on industries, but what role does the federal government play in  
19 this?

20           Mr. Fanning. Oh, they play an exceedingly important role.  
21 As I described earlier, when I think about the role of the ESCC,  
22 I describe it kind of in three levels. The first is to harmonize  
23 the efforts of the federal government. This is truly a  
24 public/private partnership, particularly in a super-regional  
25 kind of disaster where we absolutely --

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 Mr. Mullin. When you talk about a private/private  
2 partnership --

3 Mr. Fanning. Right.

4 Mr. Mullin. -- does the partnership end when the federal  
5 dollars are put in and, then, the utility companies reap the  
6 benefits of it? Or do the federal dollars, since it is a  
7 partnership, get paid back?

8 Mr. Fanning. Listen, the partnership exists whether there  
9 is a disaster or not.

10 Mr. Mullin. Sure.

11 Mr. Fanning. This is our, what we call, playbook.

12 Mr. Mullin. Right.

13 Mr. Fanning. This is our regime in which we respond to  
14 cyber, physical security, or natural disasters. And what it  
15 describes here is, frankly, not only the unity of effort, the  
16 "what's" of a restoration effort, but also the unity of message  
17 and the "how's" around a restoration effort. That has to be  
18 coordinated and harmonized between the federal government and not  
19 only electricity in this case, but, as we said before, the lifeline  
20 sectors. In cyberwarfare, it is going to be in the context of  
21 finance, telecom, electricity. Broadly, it would include  
22 transportation and water, and then, there are other priorities  
23 going from that.

24 Don't ever forget the need to harmonize, also, state and  
25 local government efforts, the boots on the ground that ultimately

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 will impact our ability to deliver.

2 Mr. Mullin. So, when we are talking about a partnership,  
3 are we talking about just in financial support or, as you are  
4 describing, all the above from the logistics behind it, from the  
5 federal government stepping out and getting some of the red tape  
6 out, letting you guys go to work, getting some waivers in place?

7 Mr. Fanning. Yes, Congressman, absolutely right. In fact,  
8 somebody else mentioned this National Infrastructure Advisory  
9 Council made a recommendation to the President to form something  
10 called a SICC, Strategic Infrastructure Coordinating Council, of  
11 electricity --

12 Mr. Mullin. We have acronyms for everything around here.

13 [Laughter.]

14 Mr. Fanning. Yes. Yes, I know it.

15 Electricity, finance, telecom. And what we will do is bring  
16 CEOs together, so me and others representing the electricity  
17 sector, finance, telecom, to put together a common set of  
18 regulatory permissions, legislative initiatives, harmonizing  
19 technology systems, information-sharing, and physical  
20 coordination. If we can get that done, that is an enormous  
21 activity.

22 The other thing that I think we need to do is inform  
23 policymakers like you all. And that is why I applaud this effort.  
24 Because there is so much noise around these kinds of disasters  
25 or potential disasters, we have to take action before they get

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 here. If all we are doing is reacting to the latest disaster --

2 Mr. Mullin. Thank you.

3 Mr. Fanning. -- we are way behind the ball.

4 Mr. Mullin. Yes.

5 Mr. Fanning. We have got to pitch, not catch.

6 Mr. Mullin. No, I agree with that. But look at that; wasn't  
7 that neat. You get a little zing in there for our chairman. Wow.  
8 That was thinking on your feet.

9 [Laughter.]

10 I agree with that. We would love to move to a point of being  
11 more proactive than reactive, and take the lessons learned. So,  
12 I actually applaud the idea of putting together that committee,  
13 so to say, where we can say, "Hey, look, this is our lessons.  
14 These are what we need. These are the roadblocks that need to  
15 be dropped. This is why it happens." And let's move forward,  
16 so we can react faster.

17 Mr. Fanning. And, Congressman, I think it needs to be  
18 CEO-led. Eighty-seven percent of the critical infrastructure is  
19 owned by private industry.

20 Mr. Mullin. Right.

21 Mr. Fanning. We have to work together.

22 Mr. Mullin. Mr. McBrayer, I have got just a short time here.  
23 The EPA issued several fuel waivers --

24 Mr. McBrayer. Yes.

25 Mr. Mullin. -- along the way for diesel and gasoline that

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 maybe didn't meet the standards, but was able to get delivered.  
2 Was it effective? Was that helpful?

3 Mr. McBrayer. I think it was effective and helpful at the  
4 time. I think one of the things we have to adjust to as it relates  
5 to getting fuel to folks who are your constituents, our consumers,  
6 is that, at least in the Southeast, we are transitioning from  
7 summer-grade gasoline to winter-grade gasoline on September 15th  
8 every year. Because of the nature of the two specifications,  
9 winter-grade gasoline is less costly than summer-grade gasoline.  
10 So, whether your inventory is in your store or whether you are  
11 a placeholder for inventory in a terminal, the financial incentive  
12 is to diminish the amount of supply that you have going into  
13 September 15 and 16 because you are going to take in many cases  
14 a 10-to-15-cent devaluation of that inventory, basically, at  
15 12:01 a.m. on the 16th.

16 One of the things I would ask from a federal perspective is  
17 to take a look at that date. Is that really the only date that  
18 we can in the Southeast convert from the lower-RVP to the  
19 higher-RVP gasoline? Or is there a way to allow that date to move  
20 from time or time, or be fixed, so that folks like RaceTrac and  
21 other members of our association are not forced by the changing  
22 cost to diminish inventories in a time where hurricanes are more  
23 likely to occur?

24 Mr. Mullin. Thank you. That is a great point.

25 And, Mr. Chairman, thank you for entertaining a little bit

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1 more time there. I yield back.

2 Mr. Olson. And seeing only Astros fans, but no further  
3 members seeking to ask questions, I would like to thank all of  
4 our witnesses again for being here today.

5 I have a unanimous consent and our nine documents for the  
6 record.

7 No. 1 is the PREPA letter to EEI and APPA.

8 No. 2 is an APPA letter to the Energy and Commerce  
9 subcommittee on mutual aid.

10 No. 3 is an APPA and EEI letter to Mr. Ricardo L. Ramos  
11 Rodriguez.

12 No. 4 is a letter from a farmer to the Energy and Commerce,  
13 the Energy Subcommittee.

14 No. 5 is the EIA supplemental testimony with attachments.

15 No. 6, AVA Med letter.

16 No. 7, letter from the FDA.

17 No. 8, GridWise Alliance document.

18 No. 9, letter to Senators Murkowski and Cantwell from the  
19 former EPA official and Puerto Rico Energy Commissioner.

20 Without objection, so ordered.

21 [The information follows:]

22

23 \*\*\*\*\* INSERT 14\*\*\*\*\*

**NEAL R. GROSS**

COURT REPORTERS AND TRANSCRIBERS  
1323 RHODE ISLAND AVE., N.W.  
WASHINGTON, D.C. 20005-3701

1           Mr. Rush. Mr. Chairman, I want to restate or reiterate my  
2 request that PREPA be subpoenaed and that we have FEMA before this  
3 subcommittee in the near future.

4           Mr. Olson. As I told my friend, I will carry that message  
5 to Chairman Upton and Chairman Walden.

6           Pursuant to committee rules, I will remind members that they  
7 have 10 business days to submit additional questions for the  
8 record. As to the witnesses, submit their response in 10 business  
9 days upon receipt of those questions.

10           And one final comment, a point of personal privilege. You  
11 guys have, it looks like, 23-and-a-half hours to get to Houston  
12 for our big parade for our Astros.

13           [Laughter.]

14           Without objection, the subcommittee is adjourned.

15           [Whereupon, at 2:31 p.m., the subcommittee was adjourned.]

**NEAL R. GROSS**
